

**⊘**Coffee break

#### Day 1 (Mon. Jun. 5)

WS01	Workshop 01	Integration of engineering, plant sciences, and agricultural research for translational research
	Application#: W04 Room 1+2 (combined)	Organized by: Ross Sozzani (North Carolina State University), Lucia Strader (Duke University) This workshop focuses on the integration of engineering and biology for plant improvement. Networks of scientists that conduct basic and applied research are critical for advancing this field. The workshop aims to cover data acquisition, data intergration, and data mining while promoting knowledge transfer and skill sharing. Biotech-enabled plant advances incorporating whole-plant structure and physiology will be essential to solve global agriculture problems.
	14:00 - 14:03	Opening remarks
WS01-01	14:03 - 14:18	Integrating Engineering, Plant Sciences, and Agricultural Research for Translational Research: An Introduction to the Workshop and Case Study Presentation  Ross Sozzani (North Carolina State University, USA) on-site, C000811
WS01-02	14:19 - 14:34	Multi-scale modeling approaches for understanding plant and agronomic systems across biological scales Cranos Williams (North Carolina State University, USA) on-site, C000792
WS01-03	14:35 - 14:50	The nexus of plant peptide-receptor modules and environmental adaptation  Akie Shimotohno (Nagoya University, Japan) on-site, C000363
	14:50 - 15:00	Closing remarks
WS02	Workshop 02	Coordinating and utilizing the rapidly growing collection of independently assembled Arabidopsis genomes
	Application#: W07 <b>Room 4</b> 14:00 - 14:01	Organized by: Magnus Nordborg (Gregor Mendel Institute, Austrian Academy of Sciences), Detlef Weigel (Max Planck Institute for Biology, Tübingen)  Advances in long-read sequencing technology have made it possible to complement the Arabidopsis reference genome with hundreds of independently assembled genomes. For these data to be useful to the community they need to be integrated with previously existing resources from the 1001 Genomes Project. We will discuss how this can be accomplished, and what we can learn from complete genome information on species-wide scale.  Opening remarks
WS02-01	14:01 - 14:10	Rapid cycles of satellite homogenization and retrotransposon invasion drive Arabidopsis pancentromere evolution
		lan Henderson (University of Cambridge, United Kingdom) on-site, C000775
WS02-02	14:11 - 14:20	The pan-genome and local adaptation of Arabidopsis thaliana Jianquan Liu (Lanzhou University, China) on-site, C000629
WS02-03	14:21 - 14:30	Assembling and Annotating Arabidopsis Genomes to Model Protein Abundance Richard Mott (University College London, United Kingdom) on-site, C000753
WS02-04	14:31 - 14:40	The Actual Mobilome of Arabidopsis thaliana Anna Igolkina (GMI, Austria) on-site, C000536
WS02-05	14:41 - 14:50	Benchmarking graph building pipeline on plant genome assemblies  Zhigui Bao (Max Planck Institute for Biology Tübingen, Germany) on-site, C000511
WS02-06	14:51 - 15:00	Challenges of annotating complex genes in the Arabidopsis long read genome collection Luisa Teasdale (Max Planck Institute - Department of Biology, Germany) on-site, C000688

<u>WS03</u>	Workshop 03	Systems biology of plant-microbes interactions
	Application#: W08 Room 5	Organized by: Shahid Mukhtar (University of Alabama at Birmingham) A systems perspective on mechanisms of pathogen infection and plants' responses to such biotic stresses can lead to significant advances in plant biology and agriculture in general. This session will highlight exciting new discoveries being made in plant-pathogen interactions by leveraging functional genomics and systems biology approaches in the model system Arabidopsis and agronomically important crop plants. We will seek topics pertinent to plant receptor networks to perceive diverse pathogens, transcriptional gene regulatory networks at different scales (e.g. tissue/single cell), mechanisms of pathogen manipulation of host plants, and systemic outcomes of infection.
	14:00 - 14:02	Opening remarks
WS03-01	14:02 - 14:15	Spatial and systems biology of plant-microbe interactions Shahid Mukhtar (University of Alabama at Birmingham, USA) on-site, C000819
WS03-02	14:16 - 14:29	MAMP and DAMP signalling contributes resistance to Fusarium graminearum in Arabidopsis Gopal Subramaniam (Agriculture and Agri-Food Canada, Canada) on-site, C000777
WS03-03	14:30 - 14:43	Attraction of Herbivores for Survival from Virulent Pathogens in Arabidopsis Kazuha Mori (Nagoya University, Japan) on-site, C000658
WS03-04	14:44 - 14:57	Functional or NAT? RNA control of receptor expression  Adam Mott (University of Toronto - Scarborough, Canada) on-site, C000144
	14:57 - 15:00	Closing remarks
<u>WS04</u>	Workshop 04	Molecular dialogues in reproductive development
	Application#: W09 Room 6	Organized by: Julia Santiago (University of Lausanne), Tetsuya Higashiyama (University of Tokyo)  The workshop will cover different aspects of molecular dialogues controling reproduction in plants.
	14:00 - 14:01	Opening remarks
WS04-01	14:01 - 14:19	Cell wall recognition and patterning by a sensor complex coordinates cell wall architecture and drives pollen tube expansion  Julia Santiago (University of Lausanne, Switzerland) on-site, C000716
WS04-02	14:20 - 14:38	Turning up the volume on intercellular communication during pollen tube reception Sharon Kessler (Purdue University, USA) on-site, C000353
WS04-03	14:39 - 14:57	Multiple roles of aspartic endopeptidases ECS1 and ECS2 in fertilization  Meng-xiang Sun (Wuhan University, China) on-site, C000229
	14:57 - 15:00	Closing remarks
	Opening	

#### **Opening**

#### Room 1+2 (combined)

15:50 - 16:00

Representative of the ICAR2023 Organizing Committee

#### KN01 Keynote 01

#### Room 1+2 (combined)

16:00 - 16:45 Transcriptional regulatory network of plant abiotic stress responses

Kazuko Yamaguchi-Shinozaki (Tokyo University of Agriculture, Japan) on-site, I000014

Chaired by Motoaki Seki (RIKEN CSRS)

#### KN02 Keynote 02

#### Room 1+2 (combined)

16:45 - 17:30 Regulation of Arabidopsis leaf growth and applications in crops

Dirk Inzé (VIB Center for Plant Systems Biology, Belgium) on-site, I000010

Chaired by Keiko Sugimoto (RIKEN CSRS)

#### Reception

#### Room 3

18:00 - 20:00

#### Day 2 (Tue. Jun. 6)

<u>PL01</u>	Plenary 01	From single cells to an organism
PL01-01	9:00 - 9:30	Padcast to Room 2)  Fast and invasive cell growth requires resilient cell wall assembly  Anja Geitmann (McGill University, Canada) on-site, 1000013  Chaired by Keiji Nakajima (Nara Institute of Science and Technology)
PL01-02	9:30 - 10:00	Mechanical conflict and cell polarity in de novo shoot initiation  Kalika Prasad (Indian Institute of Science Education and Research, India) on-site, I000007  Chaired by Akie Shimotohno (Nagoya University)
PL01-03	10:00 - 10:30	Understanding vascular development using chemical and single cell biology  Bert De Rybel (VIB/Ghent University, Belgium) on-site, 1000008
		Chaired by Ken Birnbaum (New York University)
PL02	Plenary 02	Interactions between organisms
PL02-01		Leveraging DANGEROUS MIX Autoimmunity to Understand Host-Microbe Interactions  Eunyoung Chae (National University of Singapore, Singapore) on-site, I000023  Chaired by Satoko Yoshida (Nara Institute of Science and Technology)
PL02-02	11:30 - 12:00	Overlapping and distinct pathogen effector recognition specificities conferred by independently evolved NLR proteins in plants  Kee Hoon Sohn (Seoul National University, Korea) on-site, 1000016
PL02-03	12:00 - 12:30	Chaired by Yasuhiro Kadota (RIKEN CSRS)  Understanding environmental influence on plant-pathogen interactions  Xiufang Xin (Center for Excellence in Molecular Plant Sciences, Institute of Plant Physiology and Ecology, Chinese Academy of Sciences; CEPAMS, Chinese Academy of Sciences-John Innes Center joint program, China) on-site, 1000011
		Chaired by Kei Hiruma (University of Tokyo)
WS05	Workshop 05	Science as stories: From data to presentations. The untold story of your research.
	Application#: W13 Room 1	Organized by: Belén Moro (Centre for Research in Agricultural Genomics (CRAG))  The aim of the workshop is to learn how to prepare scientific presentations that convey a clear message and maximize the output of your research. Our framework combines storytelling with how the brain process oral information along with images. We will dissect the anatomy of a presentation and discuss what makes it memorable.
<u>CC01</u>	Concurrent 01	Advances in plant nutrition under changing environment
	Application#: C04 Room 1	Organized by: Hatem Rouached (Michigan State University), Benoit Lacombe (CNRS)  Plants have evolved highly effective transport, sensing and signaling systems to ensure acquisition of sufficient minerals for growth and development. This session aims to share new results on newly identified genes/regulatory pathways or metabolites involved in the regulation of ion homeostasis in plants. These include, but are not limited to: (i) effects of limitation or excess of various macro- and microelements on plant growth capacity; (ii) effects of components of global climate changes (drought, CO2, heat, etc.) on the regulation of ions transport and assimilation.
CC01-01	14:30 - 14:37	Plant growth stimulation by elevated CO2 depends on phosphorus homeostasis in chloroplasts Hatem Rouached (Michigan State University, USA) on-site, C000178
CC01-02	14:38 - 14:48	Nutritional interactions in plants (N x P) and new type of GWAS providing full epistatic maps with a gene resolution.
CC01-03	14:49 - 15:01	Gabriel Krouk (CNRS, France) on-site, C000783  Plasticity of root permeability for nutrient acquisition  Marie Barberon (University of Geneva, Switzerland) on-site, C000209
CC01-04	15:02 - 15:14	BUZZ: An essential gene in post-initiation root hair growth and root architecture in response to nitrate
<u>CC01-05</u>	15:15 - 15:27	Karen Sanguinet (Washington State University, USA) on-site, C000813  Live transcription imaging of plant Pi starvation response  Laurent Nussaume (CEA, France) on-site, C000157
CC01-06	15:28 - 15:38	Nitrogen signaling mechanisms modulating root gravitropism: involvement of flowering repressor and peptide hormone signaling Hideki Takahashi (Michigan State University, USA) on-site, C000266
<u>CC01-07</u>	15:39 - 15:46	Histone chaperone NAP1 proteins are involved in plant growth under nitrogen deficient conditions in Arabidopsis thaliana [Short Talk]  Jie Linnan (Hokkaido University, Japan) on-site, C000670
CC01-08	15:47 - 15:54	The genetic diversity provided by natural Arabidopsis accessions to identify potentially adaptive differences in root morphology and soil resource capture [Short Talk]  Christian Hermans (Université libre de Bruxelles (ULB), Belgium) on-site, C000545

CC02	Concurrent 02	The environmentally responsive plant epigenome
	Application#: C19 Room 2	Organized by: Hong Qiao (University of Texas at Austin), Mark Zander (Rutgers, State University of New Jersey)  The environmental responsiveness of the plant epigenome is an emerging and fascinating research area. To shed new light on the underlying mechanisms, our speaker list covers exciting topics ranging from immediate impacts of stress over vernalization to technologies capturing epigenome dynamics.
	14:30 - 14:32	Opening remarks
CC02-01	14:32 - 14:48	Jasmonate signaling through the lens of epigenomics  Mark Zander (Rutgers University, USA) online, C000802
CC02-02	14:49 - 15:05	(Re)programming Cell Identity and Function in Response to intrinsic and extrinsic cues  Doris Wagner (University of Pennsylvania, USA) on-site, C000787
CC02-03	15:06 - 15:22	A DNA element to remember 'winter cold' in Arabidopsis Yuehui HE (Peking University, China) on-site, C000630
CC02-04	15:23 - 15:39	TANDEM ZINC-FINGER/PLUS3 integrates light and temperature signalling in plant nuclear hubs.  Eirini Kaiserli (University of Glasgow, Scotland, United Kingdom) on-site, C000119
CC02-05	15:40 - 15:49	Sensory plastids in growth- and defense-related epigenetic phenotype adjustment [Short Talk] Ha Eun Jeh (Pennsylvania State University, USA) on-site, C000030
<u>CC02-06</u>	15:50 - 15:59	
	15:59 - 16:00	Closing remarks
<u>CC03</u>	Concurrent 03	New tools and applications in plant molecular genetics
	Application#: C07 Room 3	Organized by: Eilon Shani (Tel Aviv University)  The session will focus on developing new genetic and biotechnological discoveries in plant biology. This year's outstanding achievements in CRISPR biology (e.g., cell-type-specific genome editing, genome-scale sgRNA libraries), imaging mass spectrometry, TF interactomics, Cryo-electron microscopy of membrane proteins, flux metabolomics, plant phenomics, root micro-fluidics, super-resolution microscopy, and single-cell methylation, spatial transcriptomics and more have gained significant success worldwide. The session will allow scientists to present their most advanced discoveries and discuss the cutting technologies transforming plant science.
	14:30 - 14:32	Opening remarks
CC03-01	•	Identifying Transcriptional Activation Domains Lucia Strader (Duke University, USA) on-site, C000832
CC03-02	•	Natural and artificial regulation of plant cell states  Ryan Lister (University of Western Australia, Australia) on-site, C000830
CC03-03	15:04 - 15:19	Time to sow: In planta CRISPR screens are ready Thomas Jacobs (VIB-UGent Center for Plant Systems Biology, Belgium) on-site, C000803
CC03-04	15:20 - 15:32	Location, location: a system-wide assesment of subcellular protein localization in Arabidopsis roots by mass-spectrometry [Short Talk]  Monique van Schie (Wageningen University, Netherlands) on-site, C000334
CC03-05	15:33 - 15:45	A single-nucleus transcriptome atlas of seed-to-seed development in Arabidopsis [Short Talk] Travis Lee (Salk Institute, USA) on-site, C000090
CC03-06	15:46 - 15:58	
		Closing remarks

<u>CC04</u>	Concurrent 04	Cellular reprogramming in regeneration and development
	Application#: C17 Room 4	Organized by: Idan Efroni (The Hebrew University), Alexis Maizel (Heidelberg University), Momoko Ikeuchi (Nara Institute of Science and Technology)  At the heart of plants' developmental plasticity is the broad ability of their cells to undergo rapid and coordinated changes in cell identity and function. This is manifested during post-embryonic formation of new organs and in their ability to repair damaged organs and tissues. The session will focus on the parallels and convergences in cellular reprogramming mechanisms during development and regeneration.
<u>CC04-01</u>	14:30 - 14:32 14:32 - 14:48	Opening remarks  Specific regulation on diverse regenerative responses in Arabidopsis  Momoko Ikeuchi (Nara Institute of Science and Technology, Japan) on-site, C000404
CC04-02	14:49 - 15:05	Born Again: The Early Stages of Plant Cell Reprogamming Kenneth Birnbaum (New York University, USA) on-site, C000778
CC04-03	15:06 - 15:22	A molecular framework for regeneration competency in plants Abdul Kareem (Swedish University of Agricultural Sciences, Uppsala, Sweden) on-site, C000737
CC04-04	15:23 - 15:34	Transcriptional Regulation of Cell-cell Movement During Root Tip Regeneration [Short Talk] Itay Cohen (Hebrew University of jerusalem, Israel) on-site, C000493
CC04-05	15:35 - 15:46	It's All in the Timing: Enhancing Regeneration Efficiency Using Morphogenic Factors [Short Talk]  Bastiaan Bargmann (Virginia Tech, USA) on-site, C000351
CC04-06	15:47 - 15:58	Leaf epidermal patterning and fate determination [Short Talk]  Chin-Min Ho (Institute of plant and microbial biology, Academia Sinica, Taiwan) on-site, C000022
	15:58 - 16:00	Closing remarks
<u>CC05</u>	Concurrent 05	Organelle-organelle communication under stress
	Application#: C20	Organized by: Eunsook Park (University of Wyoming), Inge De Clercq (VIB Center for Plant Systems Biology, Ghent University)
	Room 5	Organelles coordinate the complex intracellular metabolism in eukaryotic cells by imposing a physical barrier to sequester metabolites and macromolecules. The intricate organization of organelle-organelle communication under biotic and abiotic stresses is a recently emerging research topic and highly relevant to understanding the plant's responses to the changing environment. In this concurrent session, we will highlight the recent findings in a broad range of inter-organellar communication pathways under various stresses.
CC05-01	14:30 - 14:32 14:32 - 14:42	Opening remarks Chloroplast-nuclear communication in plant immunity
CC05-02		Eunsook Park (University of Wyoming, USA) on-site, C000348 Energy Metabolism vs. Moonlighting: A Balancing Act To Prevent Oxidative Stress
0000 02	11.10	Jennifer Selinski (Christian-Albrechts University Kiel, Germany) on-site, C000719  Investigating how chloroplast-initiated intracellular signals control intercellular trafficking mediated by
<u>CC05-03</u>	14:59 - 15:14	plasmodesmata in Nicotiana benthamiana Andrea Zanini (Donald Danforth Plant Science Center, USA) on-site, C000537
CC05-04	15:15 - 15:25	Light-induced chloroplast biogenesis: photobodies control alternative promoter selection as a mechanism of nucleus-chloroplast communication [Short Talk]  Chan Yul Yoo (University of Utah, USA) on-site, C000611
CC05-05		405nm Photostimulation of the Endoplasmic Reticulum-Chloroplast Contact Site in Arabidopsis Hypocotyls
	15:26 - 15:36	Causes Rapid Cytoskeletal Depolymerization, Elevated Cytoplasmic Calcium, and Elevated Organellar ROS [Short Talk]
CC05-06		Causes Rapid Cytoskeletal Depolymerization, Elevated Cytoplasmic Calcium, and Elevated Organellar ROS

15:58 - 16:00 Closing remarks

Oral: page 5 of 22

<u>CC06</u>	Concurrent 06	Plant proteostasis: The dynamic proteome in plant cell signalling
	Application#: C35 Room 6	Organized by: Uli Bechtold (Durham University), Ari Sadanandom (Durham University)  This ICAR session has a dual purpose in highlighting recent discoveries in plant Proteostasis as well as the tools that have been made available through the Plant Proteostasis community to enable new researchers to explore the role of proteostasis in diverse aspects of plant development and response to environment.
CC06-01	14:30 - 14:32 14:32 - 14:48	Opening remarks  SUMOcode: Deciphering how SUMOylation enables plants to adapt to their environment.  Ari Sadanandom (University of Durham, United Kingdom) on-site, C000823
CC06-02	14:49 - 15:05	Regulation of proteostasis and activation of Ca2+ channels by two distinct receptor kinases in maintaining immune integrity  Libo Shan (Texas A&M University, USA) on-site, C000340
CC06-03	15:06 - 15:22	Proximity labeling proteomics identified an inner nuclear membrane protein degradation system in plants
CC06-04	15:23 - 15:39	Yangnan Gu (University of California, Berkeley, USA) on-site, C000085  Regulation of the homeostasis of immune signaling proteins through proteasome-mediated degradation Xin Li (University of British Columbia, Canada) on-site, C000540
CC06-05	15:40 - 15:49	Identification of interacting factors of the TARANI/ Ubiquitin-specific protease 14 (UBP14) in Arabidopsis thaliana [Short Talk]  Anjana Hegde (Indian Institute of Science, India) on-site, C000514
CC06-06	15:50 - 15:59	Molecular mechanism for peroxisomal protein transport via the ubiquitin system [Short Talk] Shoji Mano (National Institute for Basic Biology, Japan) on-site, C000280
	15:59 - 16:00	Closing remarks
<u>CC07</u>	Concurrent 07	Arabidopsis and its translational research in the Global South
	Application#: C32	Organized by: Gabriela Auge (CONICET - iB3, University of Buenos Aires), José Estevez (Fundación Instituto Leloir - CONICET, Argentina / Universidad Andrés Bello, Chile)
	Room 1	Arabidopsis research globally has provided invaluable tools to understand the plant world at different biological scales. A sizable proportion of that research is carried out by researchers in the Global South (i.e. countries located around the tropics and the Southern hemisphere), even though these countries face many political and budget limitations for scientific endeavours. This symposium aims to highlight the work of researchers from the Global South, oftentimes under-represented in international conferences, to bring a more diverse perspective to the meeting.
CC07-01	16:30 - 16:32 16:32 - 16:47	Opening remarks The power of haploid genetics in plants - Lessons from Arabidopsis thaliana
		Ravi Maruthachalam (Indian Institute of Science Education and Research(IISER), Thiruvananthapuram, India) onsite, C000588
CC07-02	16:48 - 17:03	Plants to humans: Arabidopsis for translational research Sridevi Sureshkumar (Monash University, Australia) on-site, C000109
CC07-03	17:04 - 17:19	TOC1 is a direct regulator of the Arabidopsis defence response against necrotrophic pathogens Robert Ingle (University of Cape Town, South Africa) on-site, C000495
CC07-04	17:20 - 17:29	Role of the Arabidopsis AtbZlP63 transcription factor stability in energy management [Short Talk] Pamela Carlson (University of Campinas, Brazil) on-site, C000141
CC07-05	17:30 - 17:39	NLP7 is a central integrator of transcription networks in nitrogen signaling and drought stress [Short Talk]  Jose Alvarez (Centro de Biotecnologia Vegetal, Facultad de Ciencias de la Vida, Universidad Andres Bello,
<u>CC07-06</u>	17:40 - 17:49	Santiago 8370186, Chile) on-site, C000520  A B-Box protein suppresses flowering in Arabidopsis through multi-level regulation of the photoperiod pathway [Short Talk]  Rahul Puthan Valappil (Indian Institute of Science Education and Research (IISER), India) on-site, C000350
CC07-07	17:50 - 17:59	What did the grasses gain by losing PEAPOD? Evolution and conserved functionality of organ size and shape regulator PEAPOD [Short Talk] Ruth Cookson (AgResearch Ltd / University of Waikato, New Zealand) on-site, C000277
	17:59 - 18:00	Closing remarks

Oral: page 6 of 22

<u>CC08</u>	Concurrent 08	Understanding circadian regulation in unpredictable environments
	Application#: C05 Room 2	Organized by: Antony Dodd (John Innes Centre), Tokitaka Oyama (Kyoto University) Circadian clocks provide a temporal structure within plants, which contributes their responses to the fluctuating environment. Understanding how the circadian clock adapts plant physiology and development to environmental fluctuations forms a crucial part of forecasting the responses of plants- including crops- to an increasingly unpredictable climate.
	16:30 - 16:32	Opening remarks
CC08-01	16:32 - 16:46	Integration of circadian and environmental cues Antony Dodd (John Innes Centre, United Kingdom) on-site, C000793
CC08-02	16:47 - 17:01	Behaviors of cell-autonomous- and non-cell-autonomous circadian rhythms in the plant body Tokitaka Oyama (Kyoto University, Graduate School of Science, Japan) on-site, C000833
CC08-03	17:02 - 17:16	A spatial model of the plant clock reveals design principles for coordinated timing under noisy environments  James Locke (University of Cambridge, United Kingdom) online, C000746
CC08-04	17:17 - 17:31	Gene expression noise reduction for a robust circadian clock in Arabidopsis Shu-Hsing Wu (Institute of Plant and Microbial Biology, Academia Sinica, Taiwan) on-site, C000628
CC08-05	17:32 - 17:46	Molecular mechanisms underlying light-induced resetting of the circadian clock in the green alga Takuya Matsuo (Nagoya University, Japan) on-site, C000720
CC08-06	17:47 - 17:57	Quantify regulation of TOC1 and PRR5 for temperature compensation in the Arabidopsis circadian clock [Short Talk]  Akari Maeda (Nagoya university, Japan) on-site, C000653
	17:57 - 18:00	Closing remarks
CC09	Concurrent 09	Guard cell signalling and metabolism
	Application#: C23 Room 3	Organized by: Diana Santelia (ETH Zurich), Toshinori Kinoshita (Nagoya University)  Over the past few years, it has become evident that guard cell signalling and membrane ion transport are tightly coordinated with the metabolic changes occurring within the guard cells. How this intricate network is regulated at the molecular level is a fascinating question with global influence. In our session, we will discuss some of the most recent breakthrough discoveries on this topic.
	16:30 - 16:32	Opening remarks
CC09-01	16:32 - 16:40	Light regulation of stomatal movement and plasma membrane H+-ATPase in guard cells  Toshinori Kinoshita (ITbM, Nagoya University, Japan) on-site, C000748
CC09-02	16:41 - 17:06	Sugars are mesophyll messengers regulating stomatal opening under red light Yotam Zait (Hebrew University of Jerusalem, Israel) on-site, C000834
CC09-03	17:07 - 17:32	Hydrogen peroxide promotes stomatal development and opening through inducing the nuclear localization of KIN10  Mingri Rei (Shandang University, China) an eite. C000224
<u>CC09-04</u>	17:33 - 17:41	Mingyi Bai (Shandong University, China) on-site, C000231 Investigating the Role of Carbohydrate Metabolism in Bacterial-Triggered Stomatal Movements Using the Model System Arabidopsis thaliana and Pseudomonas syringe pv tomato [Short Talk] Lucia Piro (ETH Zurich, Switzerland) on-site, C000435
CC09-05	17:42 - 17:50	Phosphorylation of WD-repeat protein WDR by phototropins is essential for starch degradation to promote stomatal opening [Short Talk] Shota Yamauchi (Yamaguchi University, Japan) on-site, C000214
CC09-06	17:51 - 17:59	Stomatal CO2/bicarbonate Sensor Consists of Two Interacting Protein Kinases HT1 and MPK4/12 in Arabidopsis [Short Talk] Yohei Takahashi (Nagoya University, Japan) on-site, C000543
	17:59 - 18:00	Closing remarks

Oral: page 7 of 22

<u>CC10</u>	Concurrent 10	Development and environmental responses: What are kept and what are lost over the evolutionary history of land plants
	Application#: C14 Room 4	Organized by: Daisuke Urano (Temasek Life Sciences Laboratory), Kimitsune Ishizaki (Kobe University) Developmental strategies for adaptations to ever-changing environment have been diversified during the long history of land plant evolution. This session focuses on developmental processes and stress responses commonly present or different between the bryophyte models and Arabidopsis, and discusses how the complexity, specificity, and divergence have evolved.
	16:30 - 16:31	Opening remarks
CC10-01	16:31 - 16:49	Adapting to Adversity: Evolutionary Insights into G-protein Networks and Stress Readiness in Land Plants Ting-Ying Wu (IPMB, AS, Taiwan) on-site, C000111
CC10-02	16:50 - 17:08	Reproductive strategy control by a Marchantia GRAS transcriptional regulator
CC10-03	17:09 - 17:27	Sebastian Schornack (University of Cambridge, Sainsbury Laboratory, United Kingdom) online, C000693 Functional evolution of thermospermine in land plants
<u>CC10-04</u>	17:28 - 17:46	Miguel Blázquez (IBMCP (CSIC-U Politècnica de València), Spain) on-site, C000776  Cross-stress gene expression atlas of Marchantia polymorpha reveals the hierarchy and regulatory principles of abiotic stress responses  Marek Mutwil (Nanyang Technological University, Singapore) on-site, C000270
CC10-05	17:47 - 17:59	Analysis of stem cell-promoting CLE peptide signaling in the shoot apical meristems of land plants [Short Talk]
	17:59 - 18:00	Yuki Hirakawa (Gakushuin University, Japan) on-site, C000664 Closing remarks
<u>CC11</u>	Concurrent 11	Role of biomolecular condensates in abiotic stress signaling
<u>CC11</u>	Concurrent 11 Application#: C24	Role of biomolecular condensates in abiotic stress signaling  Organized by: Monika Chodasiewicz (King Abdullah University of Science and Technology (KAUST)), Emilio Gutierrez-Beltran (University of Sevilla)
<u>CC11</u>	Application#: C24 Room 5	Organized by: Monika Chodasiewicz (King Abdullah University of Science and Technology (KAUST)), Emilio Gutierrez-Beltran (University of Sevilla)  The session focuses on the role of biomolecular condensates in abiotic stress response. Abstracts related to BMC, formation mechanism, composition of BMC under abiotic stress are very welcome.
	Application#: C24 Room 5 16:30 - 16:35	Organized by: Monika Chodasiewicz (King Abdullah University of Science and Technology (KAUST)), Emilio Gutierrez-Beltran (University of Sevilla)  The session focuses on the role of biomolecular condensates in abiotic stress response. Abstracts related to BMC, formation mechanism, composition of BMC under abiotic stress are very welcome.  Opening remarks
CC11 CC11-01	Application#: C24 Room 5	Organized by: Monika Chodasiewicz (King Abdullah University of Science and Technology (KAUST)), Emilio Gutierrez-Beltran (University of Sevilla)  The session focuses on the role of biomolecular condensates in abiotic stress response. Abstracts related to BMC, formation mechanism, composition of BMC under abiotic stress are very welcome.  Opening remarks  Functional idling in membrane-bound condensates  Panagiotis Moschou (University of Crete, Greece) online, C000243

<u>CC12</u>	Concurrent 12	Translation regulation in plants
	Application#: C34 Room 6	Organized by: Catharina Merchante (Universidad de Málaga), Gemma Sans-Coll (Universidad de Málaga), Jose Antonio Duarte-Conde (Universidad de Málaga)  Translation is an integral component of the Central Dogma of molecular biology. Although its general mechanism is relatively well understood, little is known about the selective translation of specific mRNAs and its regulation. The
		emergence of technologies that allow in-depth study of translation resulted in new plant-specific translation mechanisms being unveiled and translationally-regulated mRNAs have been found to be key in the plant's adaptational responses. Recent examples have demonstrated the biological significance of translational regulation in plants and its potential in the generation of new, powerful biotechnological tools.
	16:30 - 16:32	Opening remarks
CC12-01	16:32 - 16:44	Uncovering the Hidden Message of mRNAs: The Exploration of Alternative Translation Initiation Sites Ming-Jung Liu (Academia Sinica, Taiwan) on-site, C000454
CC12-02	16:45 - 16:57	Diel and Circadian Dynamics of Translation in Arabidopsis via Ribosome Profiling Michael Ting (Max Planck Institute of Molecular Plant Physiology, Germany) on-site, C000427
CC12-03	16:58 - 17:10	Dynamic regulation of translation upon pathogen infection Jinlong Wang (Duke University, USA) online, C000221
<u>CC12-04</u>	17:11 - 17:22	NMD and translation of intergenic splicing-mediated polycistronic transcripts [Short Talk] Yukio Kurihara (Department of Life Sciences, Graduate School of Arts and Sciences, The University of Tokyo, Japan) on-site, C000390
CC12-05	17:23 - 17:34	Plant miRNA-target 3'-end pairing affects miRNA-mediated translational repression [Short Talk] Ho-Ming Chen (Academia Sinica, Taiwan) on-site, C000247
CC12-06	17:35 - 17:46	Deciphering the role of specialized ribosomes in plants' translation efficiency [Short Talk]  Jose Duarte-Conde (University of Málaga, Spain) on-site, C000512
CC12-07	17:47 - 17:58	Translation-coupled Epigenetic Regulation of Transposable Elements in Plants [Short Talk] Zhen Lei (CAS Center for Excellence in Molecular Plant Sciences, China) on-site, C000064
	17:58 - 18:00	Closing remarks

#### Poster discussion (Odd number)

18:00 - 20:00

Oral: page 9 of 22

#### Day 3 (Wed. Jun. 7)

	Day o (Hear o	····· <i>,</i>
<u>CC13</u>	Concurrent 13	Integration of Arabidopsis and crop research in plant biotic interactions
	Application#: C33 Room 1	Organized by: Yusuke Saijo (Nara Institute of Science and Technology), Kenichi Tsuda (Huazhong Agricultural This session will present and discuss comparative and integrative studies on Arabidopsis and crop plants in different areas of plant biotic interactions. We hope this helps to stimulate a new way of thinking, elucidate new molecular principles and develop solutions for SDGs, in the research field and beyond.
	9:00 - 9:01	Opening remarks
CC13-01	9:01 - 9:16	Mitigation of plant growth-defense trade-off through damage-associated Pep peptides and receptors under phosphate deficiency
CC13-02	9:17 - 9:32	Yusuke Saijo (Nara Institute of Science and Technology, Japan) on-site, C000678  Interactions between plants and root microbiome in rice and Arabidopsis  Yang Bai (Institute of Genetics and Developmental Biology, China) online, C000816  RCR1, a pericycle-expressed ion channel, safe-guards the stele and confers broadspectrum resistance to
CC13-03	9:33 - 9:47	clubroot Wei Wang (Institute of Genetics and Developmental Biology, Chinese Academy of Sciences, China) on-site,
CC13-04	9:48 - 10:00	Microbiome colonization leads to emergent plant phenotypes at elevated temperature [Short Talk] Hannah McMillan (Duke University, USA) on-site, C000067
CC13-05	10:01 - 10:13	Drought Recovery Induced Immunity Confers Pathogen Resistance [Short Talk] Natanella Illouz-Eliaz (Salk Institute, USA) on-site, C000252
CC13-06	10:14 - 10:29	Plant immunity and microbiota tame potentially harmful commensal bacteria Kenichi Tsuda (Huazhong Agricultural University, China) on-site, C000799
	10:29 - 10:30	Closing remarks
<u>CC14</u>	Concurrent 14	Stress-induced signalling peptides
	Application#: C36 Room 2	Organized by: Nijat Imin (Western Sydney University), Cyril Zipfel (University of Zurich)  The workshop focuses on plant peptides and receptors, other components of signalling pathways and downstream signalling events in plant development, adaptation, and in particular plant response to the environment.
CC14-01	9:00 - 9:16	Regulation and execution of plant immunity by phytocytokines  Cyril Zipfel (Institute of Plant and Microbial Biology, University of Zurich, Switzerland) on-site, C000115  Wound induced small-peptide mediated signalling cascade regulated by a receptor like kinase- RLK1 dictates
CC14-02	9:17 - 9:26	growth vs defense decision in rice [Short Talk] HARSHITH CHITHAVALLI YOGESH GOWDA (National Centre For Biological Sciences, TIFR, India) on-site,
CC14-03	9:27 - 9:43	Elucidating the peptide-receptor signalling pathways that regulates root architecture and nitrogen acquisition
CC14-04	9:44 - 10:00	Nijat Imin (University of Auckland, New Zealand) on-site, C000684  Coordination of cell surface immunity and N limitation by CEP-mediated signalling  Martin Stegmann (Technical University Munich, Germany) on-site, C000040
CC14-05	10:01 - 10:10	A cell wall-modifying gene-dependent CLE peptide transport in conferring drought resistance [Short Talk] Satoshi Endo (Kyoto University of Advanced Science, Japan) on-site, C000077 An Evolutionarily Conserved Long-distance Migrating Peptide Regulates Lignin Biosynthesis Pathway and
CC14-06	10:11 - 10:20	Plant Immunity [Short Talk] Ying-Lan Chen (National Cheng Kung University, Taiwan) on-site, C000701 The phytocytokine AtCAPE9 and its receptor AtCAPER1 functions on plant systemic stomatal immunity [Short
CC14-07	10:21 - 10:30	Talk] Chi-Hsin Chang (Agricultural Biotechnology Research Center, Academia Sinica, Taiwan) on-site, C000016
CC15	Concurrent 15	Arabidopsis relatives from laboratories to natural fields
<u>0010</u>	Application#: C16	Organized by: Kentaro K. Shimizu (University of Zurich), Hiroshi Kudoh (Kyoto University)
	Room 3	The phenotype of wild-type and mutants in natural fields is often distinct from that in regulated laboratory conditions. Recently, Arabidopsis and its relatives are emerging as model systems to understand gene function in naturally fluctuating environments, which is coined in natura. The workshop will welcome researchers from diverse disciplines including long-term regular monitoring of gene expression, epigenome and phenome in natura, predicting plant responses to global climate changes, ecological networks of diverse herbivores and pathogens, laboratory experiments capturing natural complexity such as the food web.
CC15-01	9:00 - 9:03 9:03 - 9:22	Opening remarks  A keystone genes underlies the persistence of an experimental food web  Matthew Barbour (Université de Sherbrooke, Canada) on-site, C000770
CC15-02	9:23 - 9:42	Seasonality of virus-host interactions between Turnip mosaic virus and Arabidopsis halleri during the long- term infection in a natural environment  Mie Honjo (Center for Ecological Research, Kyoto University, Japan) on-site, C000402
CC15-03	9:43 - 10:02	Keystone pairs of Arabidopsis accessions increase plant resistance to field herbivory Yasuhiro Sato (University of Zurich, Switzerland) on-site, C000118
CC15-04	10:03 - 10:14	Rapid evolution in Arabidopsis thaliana in global field experiments in the pan-genomic era [Short Talk] Xing Wu (Carnegie Institution for Science, USA) on-site, C000635
CC15-05	10:15 - 10:26	Time-series field phenotyping system PlantServation using machine learning revealed seasonal pigment fluctuation trends in diploid and polyploid Arabidopsis [Short Talk]  Toshiaki Tameshige (KIBR, Yokohama City Univ., Japan) on-site, C000567
	10:26 - 10:30	Closing remarks

CC16	Concurrent 16	Plant epigenetics and chromatin dynamics
0010		
	Application#: C01 Room 4	Organized by: Robert Schmitz (University of Georgia), Xuehua Zhong (Washington University, St. Louis) Chromatin modifications have emerged as an important regulatory mechanism for versatile biological processes. Although the DNA in each nucleus of an individual is essentially identical, the manner in which it is interpreted by the cell is dependent on its spatial and environmental context. Research incorporating innovative methods to unravel these mechanisms as well as those that incorporate the study of histone and DNA modifications, transcription factor dynamics, small RNAs, and chromatin structure will be featured within this session.
	9:00 - 9:01	Opening remarks
CC16-01	9:01 - 9:15	Molecular basis of non-CG methylation landscape in plants
CC16-02	9:16 - 9:30	Xuehua Zhong (Washington University in St. Louis, USA) on-site, C000145 <b>Dynamic regulatory mechanism of H3K27me3 demethylase REF6 responding to environment</b> Xiaofeng Cao (Institute of Genetics and Developmental Biology, Chinese Academy of Sciences, China) on-site,  C000861
<u>CC16-03</u>	9:31 - 9:45	
CC16-04	9:46 - 10:00	An evolutionary epigenetic clock in plants Frank Johannes (Technical University of Munich, Germany) on-site, C000233
<u>CC16-05</u>	10:01 - 10:10	Distinct chromatin signatures in the Arabidopsis male gametophyte [Short Talk] Zhe Wu (Southern University of Science and Technology, China) on-site, C000336
CC16-06	10:11 - 10:20	Erasure of Epigenetic Memory in Arabidopsis Flowering Control [Short Talk] Toshiro Ito (Nara Institute of Science and Technology, Japan) on-site, C000580
CC16-07	10:21 - 10:30	Temporal expression of BLADE-ON-PETIOLE 1 and 2 in successive leaves define the shape of their lamina [Short Talk] Mingli Xu (University of South Carolina, USA) on-site, C000099
<u>CC17</u>	Concurrent 17	Hidden messages of RNAs for environmental responses
<u>CC17</u>	Concurrent 17 Application#: C22 Room 5	Organized by: Ming-Jung Liu (Academia Sinica), Misato Ohtani (University of Tokyo) How do the regulatory networks between environmental factors and RNA molecules trigger plant physiological and stress responses? This concurrent session will feature the recent advances in RNA sequences- and structure-based strategies for regulating gene expression. How plant mRNAs produce novel proteins, how non-coding RNAs and RNA-binding proteins regulate RNA fates, and how RNA functionalities are diversified both at genome-wide and
<u>CC17</u>	Application#: C22 Room 5	Organized by: Ming-Jung Liu (Academia Sinica), Misato Ohtani (University of Tokyo) How do the regulatory networks between environmental factors and RNA molecules trigger plant physiological and stress responses? <u>CC18</u>	Concurrent 18	Making contacts: Membrane contact sites between plant organelles
	Application#: C08	Organized by: Joe McKenna (University of Warwick), Emily Breeze (University of Warwick)
	Room 6	Membrane contact sites (MCSs) are defined as areas of close apposition and tethering between the membranes of two organelles but crucially, the membranes do not fuse. These sites function as specific microdomains for the bi-directional exchange of molecular cargo and are linked to the propagation of intracellular signals enabling a coordinated cellular response to internal and external cues. This session will bring together plant cell biologists researching the molecular mechanisms of MCS tethers using new experimental tools and imaging techniques, with plant physiologists and pathologists interested in the wider role of MCSs in developmental and stress signalling.
CC18-01	9:00 - 9:02 9:02 - 9:20	Opening remarks  Near-UV light signaling at the chloroplast-endoplasmic reticulum-plasma membrane contact site.
<u>CC18-02</u>	9:21 - 9:39	Lawrence Griffing (Texas A&M University, USA) on-site, C000762  Plant endoplasmic reticulum-membrane contact sites and selective autophagy  Pengwei Wang (Huazhong Agricultural University, China) on-site, C000444
CC18-03	9:40 - 9:58	Lipid transport at chloroplast-mitochondria contact sites in Arabidopsis thaliana  Morgane Michaud (Laboratoire de Physiologie Cellulaire et Végétale, CNRS, UGA, INRAE, CEA, France) on-site,  C000438
<u>CC18-04</u>	9:59 - 10:17	Structure and functions of plant synaptotagmins Miguel Botella (Instituto de Hortofruticultura Subtropical y Mediterránea UMA-CSIC, Spain) on-site, C000329
<u>CC18-05</u>	10:18 - 10:23	SEED LIPID DROPLET PROTEIN 1 and 2 and LD-PLASMA MEMBRANE ADAPTOR form a lipid droplet-plasma membrane contact site that might play a role under stress [Short Talk]  Janis Dabisch (Uni Münster, Germany) on-site, C000486
<u>CC18-06</u>	10:24 - 10:29	The role of DGK1 and DGK2 in Membrane Contact Sites and Stress Tolerance [Short Talk] Selene Garcia-Hernandez (Universidad de Malaga Spain, Spain) on-site, C000522
	10:29 - 10:30	Closing remarks
<u>CC19</u>	Concurrent 19	Temporal regulation of environmental responses, growth, and development
	Application#: C09 Room 1	Organized by: Takato Imaizumi (University of Washington), Dawn Nagel (University of California, Riverside)  Plant cells respond to the same types of stimuli differently depending on when (time of the day, season, developmental ages, etc.), how often (frequency, gradual changes, and stochasticity), and how long (duration – secs, mins, hours, days, etc and kinetics) they were given. In this session, we will discuss plant responses (from cellular to developmental) that are impacted by environmental stress and regulated by time in different scales and context.
		Plant cells respond to the same types of stimuli differently depending on when (time of the day, season, developmental ages, etc.), how often (frequency, gradual changes, and stochasticity), and how long (duration – secs, mins, hours, days, etc and kinetics) they were given. In this session, we will discuss plant responses (from cellular to developmental) that are impacted by environmental stress and regulated by time in different scales and context.  Opening remarks
CC19-01	Room 1	Plant cells respond to the same types of stimuli differently depending on when (time of the day, season, developmental ages, etc.), how often (frequency, gradual changes, and stochasticity), and how long (duration – secs, mins, hours, days, etc and kinetics) they were given. In this session, we will discuss plant responses (from cellular to developmental) that are impacted by environmental stress and regulated by time in different scales and context.
CC19-01 CC19-02	Room 1  11:00 - 11:02	Plant cells respond to the same types of stimuli differently depending on when (time of the day, season, developmental ages, etc.), how often (frequency, gradual changes, and stochasticity), and how long (duration – secs, mins, hours, days, etc and kinetics) they were given. In this session, we will discuss plant responses (from cellular to developmental) that are impacted by environmental stress and regulated by time in different scales and context.  Opening remarks  The induction of florigen FLOWERING LOCUS T gene is controlled by phytochrome A high-irradiance response and external coincidence mechanism under natural long-day conditions  Takato Imaizumi (University of Washington, USA) on-site, C000184  Cold tolerance of membranes is a matter of timing and metabolic state – not just a saturation story  Rebecca Roston (University of Nebraska-Lincoln, USA) on-site, C000539

<u>CC20</u>	Concurrent 20	Interdisciplinary approaches applied to plasmodesmata research
	Application#: C15 Room 2	Organized by: Yoselin Benitez-Alfonso (Centre for Plant Sciences. University of Leeds)  Plasmodesmata provide a route for the transport of signalling proteins and RNAs, metabolites and hormones to coordinate cellular functions within tissues and across distant organs. This session aims to uncover the broad range of interdisciplinary approaches that have been recently applied to understand plasmodesmata formation and function. We will hear from researchers combining genetic and bioorthogonal chemistry approaches, and physico mechanical models to dissect plasmodesmata function as well as developing new devices and using interfamily grafts and bryophytes to follow Plasmodesmata development and their role in multicellularity. We will also discuss the potential of engineering this mechanism to improve crops in a changing environment
	11:00 - 11:01	Opening remarks
CC20-01	11:01 - 11:15	Plasmodesmata walls: a study of the mechanical and structural properties that control their biological function  Yoselin Benitez-Alfonso (Centre for Plant Sciences. University of Leeds, United Kingdom) on-site, C000349
CC20-02	11:16 - 11:30	The development of a microfluidic chip for entrapping tobacco BY-2 cells has enabled the analysis of plasmodesmata permeability using cultured cells in real-time.  Ken-ichi Kurotani (Nagoya Univ. Bioscience and Biotechnology Center, Japan) on-site, C000478
CC20-03	11:31 - 11:45	Regulation of brassinosteroid homeostasis in the Arabidopsis root Jenny Russinova (VIB-UGent, Belgium) on-site, C000468
CC20-04	11:46 - 12:00	Environmental fluctuation and regulation of intercellular communication in the moss, Physcomitrium patens Tomomichi Fujita (Hokkaido University, Japan) on-site, C000738
CC20-05	12:01 - 12:10	A long-distance top-down movement of a transcription factor regulating the root phloem development [Short Talk]  Ji-Young Lee (Seoul National University, Republic of Korea) on-site, C000204
CC20-06		A novel mechanism for plasmodesmata mediated cell-cell communication in plants [Short Talk]  Marija Smokvarska (CNRS, France) on-site, C000028
CC20-07	12:21 - 12:30	Cellular adaptations for long-distance transport through the phloem sieve tube [Short Talk]  Lothar Kalmbach (University of Lausanne, Department of Plant Molecular Biology, Switzerland) on-site, C000519
<u>CC21</u>	Concurrent 21	Molecular signaling in plant-insect interactions
	Application#: C13 Room 3	Organized by: Jyothilakshmi Vadassery (National Institute of Plant Genome Research (NIPGR)), Gen-Ichiro Arimura (Tokyo University of Science)  Molecular signaling in plant defense against herbivory is an emerging area of study with identity of receptors, channels and early signaling genes that connects it to jasmonate pathway relatively unknown. The regulation of phytohormone and glucosinolate pathway by various signaling components are also unexplored. The session will cover the latest discoveries in the field
	11:00 - 11:01	Opening remarks
CC21-01 CC21-02		Geographic, Ecological and Transcriptional Forces Shaping Glucosinolate Defense Metabolite Variation Daniel Kliebenstein (University of California, Davis, USA) on-site, C000185 Plant defense system in arabidopsis-Spodoptera interactions
CC21-03		Gen-ichiro Arimura (Tokyo University of Science, Japan) on-site, C000023  Hunting for insect secreted proteins that modulate plant immunity: Spodoptera litura- Arabidopsis interaction
		as a model system  Jyothilakshmi Vadassery (National Institute of Plant Genome Research(NIPGR), Delhi, India) on-site, C000483
CC21-04	11:52 - 12:08	Damage-activated proteolysis as a potential key player in the plant wound response
CC21-04 CC21-05		Damage-activated proteolysis as a potential key player in the plant wound response Simon Stael (Swedish University of Agricultural Sciences, Sweden) on-site, C000319 CIRCADIAN CLOCK-ASSOCIATED1 (CCA1) controls resistance to aphid by altering indole glucosinolate production [Short Talk]
	12:09 - 12:18	Damage-activated proteolysis as a potential key player in the plant wound response Simon Stael (Swedish University of Agricultural Sciences, Sweden) on-site, C000319 CIRCADIAN CLOCK-ASSOCIATED1 (CCA1) controls resistance to aphid by altering indole glucosinolate

<u>CC22</u>	Concurrent 22	Molecular condensation for reproductive and biotic stress regulation: From cell biology to biophysical mechanism
	Application#: C03 Room 4	Organized by: Yansong Miao (Nanyang Technological University), Yangnan Gu (University of California Berkeley) Biomolecular condensation (BMC) has emerged as a critical regulatory mechanism that dynamically tunes the constituents and biophysical properties of signaling complexes during plant response to diverse developmental and environmental cues. This session focuses on BMC-mediated signaling research that integrates advanced imaging, biochemical, biophysical, and mathematical approaches to understand the spatiotemporal regulation of plant immune responses and reproduction.
CC22-01	11:00 - 11:13	Molecular Condensation at Host-Pathogen Interface for Plant Immunity Yansong Miao (Nanyang Technological University SIngapore, Singapore) on-site, C000123
CC22-02	11:14 - 11:34	Formation of NPR1 condensates promotes cell survival during the plant immune response Xinnian Dong (Howard Hughes Medical Institute and Duke University, USA) on-site, C000790
CC22-03	11:35 - 11:50	Dynamic proteostasis and protein condensation in malectin-like receptor kinase-mediated activation of an intracellular immune receptor  Ping He (Texas A&M University, USA) on-site, C000347
CC22-04	11:51 - 12:06	Phenolic acid-induced stress granule formation mediates plant interspecific competition Wei Wang (Peking University, China) on-site, C000045
CC22-05	12:07 - 12:22	The compaction of flowering plant sperm through chromatin phase separation Xiaoqi Feng (Institute of Science and Technology, Austria, Austria) on-site, C000772
CC22-06	12:23 - 12:30	AGO2 condensates behavior after bacterial inoculation [Short Talk]  Moriaki Saito (University of California, Riverside, USA) on-site, C000690
<u>CC23</u>	Concurrent 23	A systems perspective: Omics integration and modeling
	Application#: C25	Organized by: Lisa Van den Broeck (North Carolina State University), Antoni Garcia (Centre for research in agricultural Genomics)
	Room 5	The characterization and quantification of interconnections among molecules is fundamental to providing a systemic view about how plants integrate, attenuate, and respond to developmental and environmental cues.  Complementary, predictive modeling of gene regulatory networks, phosphorylation cascades, hormone signaling, or metabolic pathways are powerful approaches to guide new hypotheses and base future experiments. This session will focus on studies that aim to integrate -omics datasets, unravel molecular networks, and elaborate predictive models to address functional questions in Arabidopsis.
	11:00 - 11:03	Opening remarks
CC23-01		Functional characterization of Arabidopsis protein-coding genes and lincRNAs using multi-omics networks Klaas Vandepoele (VIB-UGent Center for Plant Systems Biology, Belgium) on-site, C000107
CC23-02	11:19 - 11:34	A quantitative model of carbon partitioning during plant cold acclimation Anastasia Kitashova (LMU Munich, Germany) on-site, C000142
CC23-03	11:35 - 11:50	Modelling hormone transport within the Arabidopsis root Kristian Kiradjiev (University of Nottingham, United Kingdom) on-site, C000490
CC23-04	11:51 - 12:06	Understanding the Molecular Mechanisms Underlying FERONIA Receptor Kinase-mediated Signalling Using Multiomics Approach
CC23-05	12:07 - 12:17	Hongqing Guo (Iowa State University, USA) on-site, C000754  New elements of cis-regulatory code of plant genes revealed by deep learning models [Short Talk]
		Jedrzej Szymanski (Forschungszentrum Jülich GmbH & Leibniz Institute of Plant Genetics and Crop Plant Research, Germany) on-site, C000456
CC23-06	12:18 - 12:28	

Oral: page 14 of 22

<u>CC24</u>	Concurrent 24	Transposable elements, epigenetics, and environmental adaptation
	Application#: C28 Room 6	Organized by: Leandro Quadrana (Institut of Plant Science Paris-Saclay (IPS2)), Eriko Sasaki (Kyushu University)  This concurrent session will cover multiple aspects of epigenetic regulation and its role in environmental adaptation:  DNA methylation, chromatin modifications, transposon control, reproduction, transgenerational epigenetics, and population epigenomics.
CC24-01	11:00 - 11:01 11:01 - 11:13	Opening remarks The genetic basis of non-CG transposon methylation variation in Arabidopsis thaliana
	•	Eriko Sasaki (Kyushu University, Japan) on-site, C000321
CC24-02	11:14 - 11:26	Transposable element sequences and their epigenetic control in plants: engines of rapid adaptation?  Pierre Baduel (CNRS / ENS - PSL, France) on-site, C000496
CC24-03	11:27 - 11:39	Novel mechanism of transposon repression by histone deacetylases Hidetaka Ito (Hokkaido University, Japan) on-site, C000189
CC24-04	11:40 - 11:52	Targeted integrations of retrotransposons into centromeric regions in Arabidopsis
CC24-05	11:53 - 12:05	Sayuri Tsukahara (The University of Tokyo, Japan) on-site, C000498  Targeted Transposition in Arabidopsis
CC24-06	12:06 - 12:18	
CC24 07	10:10 10:04	Arturo Mari-Ordonez (Gregor Mendel Institute (GMI), Austria) on-site, C000801
CC24-07	12:19 - 12:24	RNA deadenylation pathway suppresses transposable elements in Arabidopsis [Short Talk] Ling Wang (CAS Center for Excellence in Molecular Plant Sciences / Institute of Plant Physiology and Ecology, China) on-site, C000092
CC24-08	12:25 - 12:30	Gene-transposon transcripts can be epigenetically regulated and impact gene response to stress conditions in Arabidopsis thaliana [Short Talk]  Jeremy Berthelier (Okinawa Institute of Science and Technology, Japan) on-site, C000474
PL03	Plenary 03	Sustainable society and plants
	Room 1 (+Live-bro	padcast to Room 2)
PL03-01	14:30 - 15:00	Plant environmental memory: adaptive plasticity in the context of climate change Gabriela Auge (Consejo Nacional de Investigaciones Científicas y Tecnologicas (CONICET), South America) on- site, 1000012
PL03-02	15:00 - 15:30	Chaired by Minako Ueda (Tohoku University)  Investigating the role of Wall-associated kinases (WAKs) during secondary wall development  Kim Johnson (La Trobe University, Australia) on-site, 1000006  Chaired by Taku Demura (Nara Institute of Science and Technolgy)
PL03-03	15:30 - 16:00	The parasitic plant (Striga) and sorghum arms race Steven Maina Runo (Kenyatta University, Kenya) on-site, I000019 Chaired by Miyo Terao-Morita (National Institute for Basic Biology)
PL04	Plenary 04	Functional metabolomics
	•	oadcast to Room 2)
PL04-01	•	How do Plants Evolve Specialized Metabolites and Pathways? Asaph Aharoni (Weizmann Institute of Science, Israel) on-site, I000026
PL04-02	17:00 - 17:30	Chaired by Mami Yamazaki (Chiba University)  Dissecting gene-metabolite relationships in the legume terpenome  Sibongile Mafu (University of Massachusetts Amherst, USA) on-site, 1000018
		Chaired by Miyako Kusano (University of Tsukuba)

#### Poster discussion (Even number)

18:00 - 20:00

Oral: page 15 of 22

#### Day 4 (Thu. Jun. 8)

<u>WS06</u>	Workshop	06	Single cell technologies and its diversity of applications
	Application# Room 1	t: W10	Organized by: Ao Liu (HHMI-Stanford University), Bruno Guillotin (NYU-Center of Genomics and Systems Biology) The fast development of single cell technology is revolutionizing the field of omics study. In the past few years, plant biologists have successfully adopted single cell technology and generated multiple plant cell atlases. These datasets allow us to capture the transcriptomic diversity in different cell types and help us understand cellular heterogeneity, as well as the basis of cell identity and cell fate transitions. For this session, we would like to focus on the most recent advances in the application of single cell technologies.
111000 01	9:00 -	9:02	Opening remarks
WS06-01	9:02 -	9:15	Origin and diversification of the cell types of the flower Luke Nikolov (Indiana University, USA) on-site, C000809
WS06-02	9:16 -	9:29	Constructing an Arabidopsis Embryonic Expression Atlas using snRNA-seq Ping Kao (Graduate School of Life Sciences, Tohoku University, Japan, Japan) on-site, C000322
WS06-03	9:30 -	9:43	Cell Cycle Dynamics During Plant Cell Reprogramming Laura Lee (New York University, USA) on-site, C000509
WS06-04	9:44 -	9:57	Time-resolved single-cell and spatial gene regulatory atlas of plants under pathogen attack Tatsuya Nobori (Salk Institute, USA) on-site, C000125
	9:57 -	10:00	Closing remarks
<u>WS07</u>	Workshop	07	Watching and quantifying biochemical processes in intact plants
	Application# Room 2	t: W03	Organized by: Cheng-Hsun Ho (ABRC, Academia Sinica) The understanding of signaling and metabolic processes in multicellular organisms requires knowledge of the spatial dynamics of small molecules and the activities of enzymes, transporters and other proteins in vivo, as well as biophysical parameters inside cells and across tissues. Genetically encoded sensors are engineered fluorescent proteins that have been developed for a wide range of small molecules, such as ions and metabolites, or to report biophysical processes, such as transmembrane voltage or tension.
WS07-01	9:00 - 9:02 -	9:02 9:17	Opening remarks Live show of nitrate dynamics in root nd developemt of Arabidopsis
WS07-02	9:18 -	9:38	Ho Cheng-Hsun (Academia Sinica, Taiwan) on-site, C000122  Towards Soil-on-a-Chip — structured micro-environments for root science  Guido Grossmann (Heinrich-Heine-University Duesseldorf, Germany) on-site, C000824
WS07-03	9:39 -	9:59	CO2 Sensing and Signaling Components are Required for Stomatal Responses to Elevated Temperatures Nattiwong Pankasem (University of California San Diego, USA) on-site, C000359
	9:59 -	10:00	Closing remarks
<u>WS08</u>	Workshop	08	Spatiotemporal dynamics of protein and protein complexes in the cell
	Application# Room 3	±: W06	Organized by: Hisashi Koiwa (Texas A&M University), Libo Shan (Texas A&M University), Juan Dong (Rutgers Recent advances in biochemistry and biophysics, plant molecular and cell biology revealed that the differential fate of proteins in cell space including transport, modification, and even aggregation leads to contrasting cellular output in abiotic and biotic defense responses and plant development. Hence, the need for the detection and visualization of protein complex dynamics in living cells has become the technology of utmost importance. This workshop aims to showcase cutting-edge technologies and findings in spatiotemporal dynamics of cellular proteins and protein complexes.
	9:00 -	9:02	Opening remarks
WS08-01	9:02 -	9:15	Tandem fluorescent timer in Plants: A Tool for Acquiring Spatiotemporal Information about Proteins Yukihiro Nagashima (Texas A&M University, USA) on-site, C000535
WS08-02	9:16 -	9:29	Ironing out the issues: protein dynamics in response to iron deficiency Terri Long (North Carolina State University, USA) on-site, C000749
WS08-03	9:30 -	9:43	Plant plasma membrane nano-organization and cell polarization  Xue Pan (University of Toronto Scarborough, Canada) on-site, C000513
WS08-04	9:44 -	9:57	Unraveling the molecular and cellular mechanisms underlying a MLR-NLR complex-regulated autoimmunity Fausto Andres Ortiz Morea (Texas A&M University / Universidad de la Amazonia, USA) online, C000756
	9:57 -	9:58	Closing remarks

<u>WS09</u>	Workshop 09	Arabidopsis small RNA biology
	Application#: W01 Room 4	Organized by: Keith Slotkin (Donald Danforth Plant Science Center & University of Missouri)  This workshop will focus on newly discovered roles of small RNAs, highlighting two hot areas of research in the field: 1) The function of small RNAs that are generated only in very specific reproductive cells, and 2) The role of small RNA warfare during the Arabidopsis-pathogen/pest interaction.
WS09-01	9:00 - 9:01 9:01 - 9:12	Opening remarks  Mating system influences the requirement for RdDM during reproduction in Brassicaceae
WS09-02	9:13 - 9:24	Rebecca Mosher (University of Arizona, USA) on-site, C000533  Interspecies regulatory small RNAs in plant-parasite interactions Saima Shahid (Oklahoma State University, USA) on-site, C000608
WS09-03	9:25 - 9:36	Translation-dependent epigenetic silencing of transposon Jungnam Cho (Chinese Academy of Sciences, China) on-site, C000097
WS09-04	9:37 - 9:48	Reproductive barriers established by epigenetic mechanisms in the endosperm  Claudia Köhler (Max Planck Institute of Molecular Plant Physiology, Germany) on-site, C000767
WS09-05	9:49 - 10:00	Regulating Pol-IV to generate epigenetic diversity  Julie Law (Salk Institute for Biological Studies, USA) on-site, C000785
<u>WS10</u>	Workshop 10	Arabidopsis bioinformatics
	Application#: W05 Room 5	Organized by: Nicholas Provart (University of Toronto), Tanya Berardini (Phoenix Bioinformatics) This workshop will feature updates and introductions of online resources that are part of the Arabidopsis scientist's modern research toolkit, just like laboratory equipment, enzymes, and buffers. Essential resources like TAIR and BAR will be revisited in addition to highlighting resources created and maintained by community members in the Asia Pacific region that are of global importance.
WS10-01	9:00 - 9:02 9:02 - 9:14	Welcome Updates to the Bio-Analytic Resource
WS10-02	9:15 - 9:27	Nicholas Provart (University of Toronto / BAR, Canada) on-site, C000795  To integrate or not to integrate: how to collaborate with conversational Al programs
WS10-03	9:28 - 9:40	Masanori Arita (RIKEN Center for Sustainable Resource Science, Japan) on-site, C000820  Complete sequence assembly of Arabidopsis ribosomal DNA (rDNA) arrays provides insight into rDNA
WS10.04	0.41 0.52	variation, epigenetic regulation and large scale recombination Ramya Enganti (HHMI/Indiana University, USA) on-site, C000711 The 2023 TAIR undeter From basics to the progress with the community developed v12 of the group
WS10-04	9:41 - 9:53 9:53 - 10:00	The 2023 TAIR update: From basics to the progress with the community-developed v12 of the genome Tanya Berardini (The Arabidopsis Information Resource/Phoenix Bioinformatics, USA) on-site, C000791 Discussion/Q&A/Questions for all speakers
	3.55 - 10.00	Discussion/Qurviquestions for all speakers
<u>CC25</u>	Concurrent 25	The road to recovery: Elucidating stress recovery pathways and reversing stress effects
	Application#: C21 Room 1	Organized by: Natanella Illouz-Eliaz (Salk Intitute), Travis Lee (Salk Institute)  Plants manifest a plethora of responses from the molecular to the phenotypic level when exposed to different environments. For example, plants under water deprivation often develop smaller and darker leaves than their well-watered counterparts. Extensive empirical work has shown that gene expression is a key determinant of the physiological and developmental responses of plants to environmental cues. Further, the return to homeostasis following environmental challenges can be associated with processes distinct from the stressor proper, yet are of equal importance for plant survival. In this session, we will focus on the frontier between stress tolerance and recovery to understand mechanisms affecting reproductivity and yield after encountering stress. Although some studies consider stress recovery, it is mostly presented as a control that stressful conditions have relieved. In order to reshape a plant's ability to cope with stress and recovery responses and to enhance plant performance under fluctuating environments there is a need to gain a greater understanding of the margin between the stress, differences in response to various stress severities, and stress recovery as a process that can be studied and improved.
CC25-01	10:30 - 10:35 10:35 - 10:55	Opening remarks  Conflicts in phenotypic natural selection constrain adaptation to climate change in Arabidopsis thaliana  Moi Exposito-Alonso (Carnegie Institution for Science, Stanford University, USA) on-site, C000550
CC25-02	10:56 - 11:16	Molecular and evolutionary basis of selective autophagy-mediated heat stress recovery in plants Yasin Dagdas (Gregor Mendel Institute, Austria) on-site, C000136
CC25-03	11:17 - 11:37	Leveraging ecological specialization to understand plant drought tolerance strategies and their genetic modulation: a focus on ecological divergent Arabidopsis species
CC25-04	11:38 - 11:48	Juliette de Meaux (University of Cologne, Germany) online, C000839  Transcription factor and chromatin-based heat memory in plants [Short Talk]
CC25-05	11:49 - 11:59	Nobutoshi Yamaguchi (Nara Institute of Science and Technology, Japan) on-site, C000226  Response of Arabidopsis thaliana to flooding with physical flow [Short Talk]  Nobuhiro Suzuki (Sophia University, Japan) on-site, C000596

CC26	Concurrent 26	Receptor kinase signaling in development
<u>5525</u>	Application#: C12 Room 2	Organized by: Christian Hardtke (University of Lausanne), Jamie Van Norman (UC Riverside) In recent years, receptor kinase pathways have gained prominence in developmental processes. This session features the latest developments in their characterization in phenomena as diverse as polarity, cell division
CC26-01	10:30 - 10:31 10:31 - 10:50	orientation or regeneration.  Opening remarks  Which side are you on? Linking polarized receptor kinases to root cell division control  Jaimie Van Norman (University of California, Riverside, USA) on-site, C000572
CC26-02	10:51 - 11:10	Beyond stem cells: Novel roles for CLE peptide signaling in shoot apical meristems and the environmental control of plant growth.  Zachary Nimchuk (University of North Carolina at Chapel Hill, USA) on-site, C000354
CC26-03	11:11 - 11:30	CLE-BAM/CIK signaling in root vascular patterning Pingping Qian (Osaka University, Japan) on-site, C000424
<u>CC26-04</u>	11:31 - 11:40	Coordinating root system architecture: the intersection of CEP and Cytokinin hormone pathways in Arabidopsis [Short Talk]
CC26-05	11:41 - 11:50	Michael Taleski (Australian National University, Australia) on-site, C000696  Stomata-derived intercellular signaling that directs mesophyll air space formation [Short Talk]  Yuki Yoshida (Kumamoto University, Japan) on-site, C000712
CC26-06	11:51 - 12:00	A phosphoinositide hub connects CLE peptide signaling and polar auxin efflux regulation [Short Talk] Qian Wang (DBMV, University of Lausanne, Switzerland) on-site, C000096
<u>CC27</u>	Concurrent 27	Chemical priming as a sustainable tool for improved productivity under stress conditions
	Application#: C30 Room 3	Organized by: Vassilis Fotopoulos (The Cyprus University of Technology), Khurram Bashir (Lahore University of Management Sciences) Chemical biology could contribute towards crop improvement while improving farmers' income and ultimately contributing towards good health and sustainable agricultural practices. This could also help achieve sustainable development goals (SDGs) such as SDG1: No Poverty (Through improving farmers' income) SDG2: Zero hunger (Through enhanced crop production) SDG3: Good Health and Well-being (Through improved nutritional quality)
CC27-01	10:30 - 10:31 10:31 - 10:46	The session would provide an opportunity to share the latest trends in the chemical biology of plants.  Opening remarks  Signalling and epigenetic maintenance of plant immune memory by chemical priming agents.  Jurriaan Ton (University of Sheffield, United Kingdom) on-site, C000829
CC27-02	10:47 - 11:02	Employment of functionalized nanoparticles and polymers towards climate-smart crops  Vasileios Fotopoulos (Cyprus University of Technology, Cyprus) on-site, C000827
CC27-03	11:03 - 11:18	Ethanol-mediated chemical priming to mitigate drought stress in plants  Khurram Bashir (Lahore University of Management Sciences, Pakistan) on-site, C000160
CC27-04 CC27-05	11:19 - 11:30	Screening chemicals regulating ion channels and modulating plant growth mechanism  Nobuyuki Uozumi (Tohoku University, Japan) on-site, C000153  VDAL, a new protein biostimulant from Verticillium dahliae and its applications in Agriculture
CC27-06	11:43 - 11:51	Zhizhong Gong (China Agricultural University, China) on-site, C000784  Chemical biology study of jasmonate signaling by development of a biased agonist derived from stereoisomers of coronatine [Short Talk]
CC27-07	11:52 - 12:00	Kengo Hayashi (Tohoku University, Japan) on-site, C000261  Identification of new targets for improving abiotic stress tolerance in plants [Short Talk]  María del Rosario González Bermúdez (Universitat Politècnica de València, Spain) on-site, C000218
CC28	Concurrent 28	Cross-kingdom RNA communications and innovative Eco-friendly disease control solutions
	Application#: C02 Room 4	Organized by: Hailing Jin (University of California, Riverside)  Cross-kingdom RNA communications between plants and interaction organisms is a newly emerging field.  Understanding the molecular mechanisms and regulatory pathways underlying the RNA communications will help us design RNA-based new generation of plant protection solutions that are more effective and environmentally friendly.
CC28-01	10:30 - 10:31 10:31 - 10:54	Opening remarks  Cross-kingdom RNA trafficking between plants and fungal pathogens  Hailing Jin (University of California, Physicial JISA) on site C000826
CC28-02	10:55 - 11:18	Hailing Jin (University of California, Riverside, USA) on-site, C000826  Extracellular vesicles: Emerging Players in Plant Defense Against Pathogens  Qiang Cai (Wuhan University, China) online,
CC28-03	11:19 - 11:42	Extracellular small RNAs direct gene silencing in a plant-interacting bacterium Lionel Navarro (Institut de Biologie de l'Ecole Normale Supérieure (IBENS), France),
CC28-04	11:43 - 11:58	Proof of concept: circular antisense RNAs (caRNAs) as a new mode of action for RNA-based plant protection [Short Talk] Timo Schlemmer (University of Regensburg, Germany) on-site, C000757
	11:58 - 12:00	Closing remarks

<u>CC29</u>	Concurrent 29	Visualizing the dynamics of the circadian clock
	Application#: C27 Room 5	Organized by: Chin-Mei Lee (National Taiwan University), Huang-Lung Tsai (National Taiwan University)  Plant circadian clocks continuously adjust their rhythm in accordance with the ever-changing environments at different temporal and spatial levels. The advance in techniques and imaging systems along with the development of algorithms allow us to visualize the circadian clock interacting with environments at a whole plant to single-cell levels.
CC29-01	10:30 - 10:31 10:31 - 10:46	Opening remarks  Investigating the dynamic regulation of stress-responsive genes in plants.
CC29-02	10:47 - 11:02	Dawn Nagel (University of California, Riverside, USA) on-site, C000806  Characterization of the long-distance circadian communication through micro-grafting techniques  Nozomu Takahashi (Nara Institute of Science and Technology, Japan) on-site, C000683
CC29-03	11:03 - 11:15	Microfocus X-ray CT Analysis of Arabidopsis Petioles for Leaf Movement [Short Talk] Maika Hayashi (Nara institute of science and technology, Japan) on-site, C000577
CC29-04	11:16 - 11:28	Identification of LWD1-interacting proteins reveals novel regulators for Arabidopsis circadian clock [Short Talk]
CC29-05	11:29 - 11:41	Chun-Kai Huang (Institute of Plant and Microbial Biology, Academia Sinica, Taiwan, ROC, Taiwan) on-site, C000200 ROS around the clock: Superoxide as a metabolic signal affecting circadian rhythms and growth [Short Talk] Mike Haydon (University of Melbourne, Australia) on-site, C000113
CC29-06		Long-distance circadian coordination via a phloem-delivered mobile transcript [Short Talk]  András Székely (Max Planck Institute of Molecular Plant Physiology, Germany) on-site, C000473
	11:54 - 11:55	Closing remarks
<u>WS11</u>	Workshop 11	Diversity and inclusion for excellence in science
	Application#: W11 Room 1	Organized by: Joanna Friesner (North American Arabidopsis Steering Committee, USA), Yoselin Benitez-Alfonso (Leeds University), Kanako Bessho-Uehara (Tohoku University)  Research and training using Arabidopsis has been vital to the success of plant science due, in large part, to sustained global collaborations in the plant science community. While recent studies indicate clear benefits of diversity and inclusion, progress in these areas is slow and has been driven by a few countries. This moderated workshop will feature a panel of plant biology faculty that will provide diverse perspectives on the challenges of working within academia, and the benefits of creating and sustaining a diverse community to achieve excellence.
	12:45 -	Moderator: Keiko Torii (HHMI/UT Austin/Nagoya University, USA/Japan) Panelists: Gabriela Auge (CONICET, University of Buenos Aires, Argentina) Yoselin Benitez-Alfonso (Leeds University, United Kingdom) Kanako Bessho-Uehara (Tohoku University, Japan) Andrea Ramirez (Stanford University, USA) Terri Long (NCSU, USA) Keith Slotkin (DDPSC & University of Missouri, USA) Hironaka Tsukagoshi (Meijo University, Japan)
<u>CC30</u>	Concurrent 30	Living on the edge: Adaptation of Arabidopsis extremophyte relatives to harsh environments
	Application#: C10 Room 2	Organized by: Maheshi Dassanayake (Louisiana State University), Simon Barak (Jacob Blaustein Institutes for Desert Research, Ben-Gurion University of the Negev)  Extremophytes, plants that inhabit harsh environments, represent novel genetic resources underexplored for their adaptations to multiple environmental stresses. Specifically, extremophytes that are closely related to Arabidopsis are ideal models for comparative multi-level analyses. This session will focus on systems biology research of Arabidopsis extremophyte relatives from physiological through molecular, "omics", evolutionary, and ecological studies to elucidate mechanisms allowing these intriguing plants to survive the most extreme environments on the planet.
CC30-01	14:00 - 14:01 14:01 - 14:15	Opening remarks  A counterintuitive conundrum: Salt inhibition of halophytic seed germination  Simon Barak (Ben-Gurion University of the Negev, Israel) online, C000828
CC30-02	14:16 - 14:30	Role and Functional Differences of HIGH-AFFINITY K+ TRANSPORTER1 (HKT1)-Type Transporters in Plants under Salt Stress  Dae-Jin Yun (Konkuk University, Republic of Korea) on-site, C000163
CC30-03	14:31 - 14:45	Exploring plant adaptations to aquatic environments: A study of Rorippa aquatica, an amphibious plant living at the edge of the water
CC30-04	14:46 - 15:00	Seisuke Kimura (Kyoto Sangyo University, Japan) on-site, C000324  Discovering how evolutionary innovations in growth regulation contribute to plant stress tolerance  Prashanth Ramachandran (Stanford University, USA) on-site, C000594
CC30-05	15:01 - 15:10	Enhanced Salt Tolerance by an Antarctic moss gene [Short Talk]  NoA Bae (Sogang university, Republic of Korea) on-site, C000579
CC30-06	15:11 - 15:20	Altitudinal genetic differentiation in the leaf wax-mediated flowering bud protection against frost in an early-spring flowering herb, Arabidopsis halleri [Short Talk]
CC30-07	15:21 - 15:30	Hiroshi Kudoh (Center for Ecological Research, Kyoto University, Japan) on-site, C000599  Seasonal dynamics of epigenome in a natural population of Arabidopsis halleri [Short Talk]  Haruki Nishio (Shiga University, Japan) on-site, C000529

<u>CC31</u>	Concurrent 31	Short and long range signaling by RNA
	Application#: C26 Room 3	Organized by: Dave Jackson (Cold Spring Harbor Laboratory), Margaret Frank (Cornell University), Fritz Kragler (Max Planck Institute of Molecular Plant Physiology), Michitaka Notaguchi (Nagoya University)  Plant development, physiology and defense are controlled by several classes of mobile RNAs that move both cell-to-cell, through plasmodesmata, and into the phloem for systemic movement. Mobile mRNAs control meristem, leaf
		and tuber development, among other processes. Small RNA silencing signals and miRNAs also move systemically through plasmodesmata and the phloem, for example, to control nutrient homeostasis. The workshop will present new findings in this exciting emerging area of plant biology research.
	14:00 - 14:02	Opening remarks
CC31-01	14:02 - 14:16	Deciphering signals from the noise in the mRNA mobileome using comparative Solanaceae genomics  Margaret Frank (Cornell University, USA) on-site, C000794
CC31-02	14:17 - 14:31	An RNA exosome subunit promotes cell-to-cell trafficking of a homeobox mRNA via plasmodesmata  Munenori Kitagawa (College of Horticulture & Forestry Sciences, Huazhong Agricultural University, China) on-site, C000051
CC31-03	14:32 - 14:46	Investigation of mRNAs that move long-distance Michitaka Notaguchi (Nagoya University, Japan) on-site, C000398
CC31-04	14:47 - 15:01	Lost in translation? The long-distance travel of messenger RNAs  Friedrich Kragler (Max-Planck-Institute of Molecular Plant Physiology, Germany) on-site, C000139
CC31-05	15:02 - 15:10	Arabidopsis cyclophilins direct intracellular transport of mobile mRNA via organelle hitchhiking [Short Talk] Tien-Shin Yu (Institute of Plant and Microbial Biology, Academia Sinica, Taiwan) on-site, C000150
CC31-06	15:11 - 15:19	A cell wall-modifying enzyme controls symplastic movement of RNA silencing in aerial Arabidopsis tissues [Short Talk] Florence Brioudes (ETH Zürich, Switzerland) on-site, C000315
CC31-07	15:20 - 15:28	Dose-dependent long-distance movement of microRNA399 duplex regulates phosphate homeostasis in Arabidopsis [Short Talk]
	15:28 - 15:30	Chih-Pin Chiang (Agricultural Biotechnology Research Center, Academia Sinica, Taiwan) on-site, C000656 Closing remarks
		·
<u>CC32</u>	Concurrent 32	Mechanisms and functions of endocytosis in plants
<u>CC32</u>	Concurrent 32 Application#: C18	
CC32		Mechanisms and functions of endocytosis in plants
CC32	Application#: C18	Mechanisms and functions of endocytosis in plants  Organized by: Jenny Russinova (VIB-UGent Center for Plant Systems Biology), Takashi Ueda (NIBB)  Plant endocytosis underlies a plethora of biological processes including nutrient uptake, signal transduction, development, polarity and tropic growth, immunity and responses to abiotic stress. However, the molecular machinery of endocytosis, its regulation and exact biological impacts are only beginning to be understood in plants. This session will cover the following topics (1) Molecular mechanisms of endocytosis in plants; (2) Endocytosis and plant polarity, development and nutrient uptake; (3) Endocytosis and plant-pathogen interactions; (4) Endocytosis
CC32 CC32-01	Application#: C18 Room 4	Mechanisms and functions of endocytosis in plants  Organized by: Jenny Russinova (VIB-UGent Center for Plant Systems Biology), Takashi Ueda (NIBB)  Plant endocytosis underlies a plethora of biological processes including nutrient uptake, signal transduction, development, polarity and tropic growth, immunity and responses to abiotic stress. However, the molecular machinery of endocytosis, its regulation and exact biological impacts are only beginning to be understood in plants. This session will cover the following topics (1) Molecular mechanisms of endocytosis in plants; (2) Endocytosis and plant polarity, development and nutrient uptake; (3) Endocytosis and plant-pathogen interactions; (4) Endocytosis and cell wall biogenesis; (5) Crosstalk between endocytosis, exocytosis and autophagy  Opening remarks  Mechanistic insight into plant endocytosis  Daniel Van Damme (Ghent University Department of Plant Biotechnology and Bioinformatics and VIB Center for
	Application#: C18 Room 4  14:00 - 14:02	Mechanisms and functions of endocytosis in plants  Organized by: Jenny Russinova (VIB-UGent Center for Plant Systems Biology), Takashi Ueda (NIBB)  Plant endocytosis underlies a plethora of biological processes including nutrient uptake, signal transduction, development, polarity and tropic growth, immunity and responses to abiotic stress. <u>CC33</u>	Concurrent 33	Front-line of plant genome engineering
	Application#: C31 Room 5	Organized by: Daisuke Miki (Center of Excellence for Molecular Plant Sciences, Chinese Academy of Sciences), Masaki Endo (National Agriculture and Food Research Organization (NARO)), Yuriko Osakabe (School of Life Science and Technology, Tokyo Institute of Technology) Genome engineering are revolutionizing life sciences and plant biotechnology that seek to develop new technologies for the precise manipulation of genes and genomes in vivo. In addition to its use for advancing our understanding of basic biology, genome engineering has numerous applications for improving agronomically traits. In this session, we will present and discuss recent advances in nuclear and organelle genome engineering approaches, novel tools and delivery system.
	14:00 - 14:01	Opening remarks
CC33-01	14:01 - 14:18	Genome engineering for plastid and mitochondria Shin-ichi Arimura (University of Tokyo, Japan) on-site, C000254
CC33-02	14:19 - 14:36	Towards versatile plant gene editing systems: the wisker-based direct delivery method and small-size Cas protein  Shigeo Sugano (National Institute of Advanced Industrial Science and Technology (AIST), Japan) on-site, C000660
CC33-03	14:37 - 14:54	CRISPR/Cas-meditated Chromosome and Tissue Engineering in Arabidopsis Holger Puchta (Karlsruhe Institute of Technology, Germany) online, C000075
CC33-04	14:55 - 15:12	Gene editing in Arabidopsis using RNA viruses
CC33-05	15:13 - 15:21	Daniel Voytas (University of Minnesota, USA) online, C000369  Insights into tRNA-like structures (TLS) as motifs facilitating long-distance transport of mRNAs [Short Talk]  Eleftheria Saplaoura (Max Planck Institute for Molecular Plant Physiology, Germany) on-site, C000497
CC33-06	15:22 - 15:29	Single-cell targeted chemical or genetic boosting of genome editing in maize [Short Talk]
	15:29 - 15:30	Ling Meng (KWS Group, USA) on-site, C000079 Closing remarks
<u>WS12</u>	Workshop 12	MASC: Arabidopsis for SDGs/4th Decadal Vision
	Application#: W14 Room 1  14:00 -	Organized by: Nicholas Provart (University of Toronto), Masatomo Kobayashi (RIKEN BRC)  The theme of this year's ICAR is Arabidopsis for Sustainable Development Goals. Participants will discuss how research in Arabidopsis can be leveraged to help achieve some of the United Nation's 17 SDGs, especially in the area of zero hunger, climate action, and life on land. In addition, participants will discuss how Arabidopsis research can help address important plant science questions (such as those posed in Armstrong et al., 2023; doi. 10.1111/nph.18771) and the kinds of international projects that might be considered as part of a 4th decadal vision for Arabidopsis research, following on from successful collaborations that have arisen from 3 decades of coordinated efforts.  Panelists:  Gabriela Auge (CONICET, Univ. of Buenos Aires, Argentina)  Mentewab Ayalew (Spelman College, USA)  Sureshkumar Balasubramanian (Monash Univ, Australia)  Dirk Inze (VIB, Belgium)  Kazuki Saito (RIKEN CSRS, Japan)
<u>PL05</u>	Plenary 05	Evolution and ecology
	•	padcast to Room 2)
PL05-01	16:00 - 16:30	Adaptation in natural populations of outcrossing Arabidopsis species  Filip Kolář (Charles University, Czech Republic) on-site, I000025  Chaired by Takashi Tsuchimatsu (University of Tokyo)
PL05-02	16:30 - 17:00	The Mendelian and polygenic bases of weedy Arabidopsis thaliana evolution  Chaired by Takashi Tsuchimatsu (University of Tokyo)  The Mendelian and polygenic bases of weedy Arabidopsis thaliana evolution  Cheng-Ruei Lee (National Taiwan University, Taiwan) on-site, 1000015  Chaired by Takashi Tsuchimatsu (University of Tokyo)  Chaired by Takashi Tsuchimatsu (University of Tokyo)  Chaired by Takashi Tsuchimatsu (University of Tokyo)
PL05-03	17:00 - 17:30	All bullseyes great and small: Eco-Evo-Devo of petal patterning in Hibiscus  Edwige Moyroud (University of Cambridge, UK) on-site, 1000017  Chaired by Vincent Castric (CNRS - University of Lille)

#### **Banquet**

18:00 - 22:30

#### Day 5 (Fri. Jun. 9)

<u>PL06</u>	Plenary 06	Integration of environmental cues
	Room 1+2 (combi	ned)
PL06-01	9:00 - 9:30	"To GROW or not to GROW": molecular mechanism of cell elongation at low temperature in single plant cells.  José M. Estevez (CBV-UNAB/Fundación Instituto Leloir-IIBBA, Chile/Argentina) on-site, 1000009
		Chaired by Jian-Kang Zhu (Southern University of Science and Technology)
PL06-02	9:30 - 10:00	Integrating osmotic potential with Jasmonate-mediated plant acclimation
		Debora Gasperini (Leibniz Institute of Plant Biochemistry (IPB) , Germany/Croatia) on-site, l000020 Chaired by Shu-Hsing Wu (Academia Sinica)
PL06-03	10:00 - 10:30	Peptide signal-mediated adaptation to spatially and temporally fluctuating environments in plants Yoshikatsu Matsubayashi (Nagoya university Japan) on-site 1000024

#### KN03 Keynote 03

#### Room 1+2 (combined)

11:00 - 11:45 Deconstructing Plant Processes: Cell by Cell

Joseph Ecker (Salk Institute for Biological Studies, USA) on-site, I000022

Chaired by Tetsuya Higashiyama (University of Tokyo)

Oral: page 22 of 22

Chaired by Tomonao Matsushita (Kyoto University)

#### Closing and Introduction of ICAR2024

Room 1+2 (combined)

11:45 - 12:00 Representatives of the Organizing Committees of ICAR2023 and ICAR2024

#### **Poster presentations**

	Overexpression of soybean Class II acyl-CoA-binding proteins unveils an oxylipin signaling mechanism in
Day 2	salt-stressed Arabidopsis
18:00	•
	China)
Day 3	Enhanced Salt Tolerance by an Antarctic moss gene
18:00	NoA Bae (Sogang university, Korea)
Day 2	Chenopodium quinoa as a model plant to study salt stress
19:00	Lucia Acosta-Gamboa (Donald Danforth Plant Science Center)
Day 3	Investigation of heterosis in the salinity tolerance of intraspecific hybrid in Arabidopsis thaliana
19:00	Yoshiki Kamiya (Kobe University, Japan)
	Overexpression of eelgrass Rare Cold Inducible 2 (RCI2) encoding a small-membrane protein maintains
Day 2	chlorophyll content in Arabidopsis subjected to high salinity and dehydration
18:00	Hajime Shiota (Yokohama City Univ., Japan)
Day 3	Arabidopsis APYs interact with PATL4 and co-regulate stress response in plants
18:00	Jia-Hong Tang (National Taiwan University, Taiwan)
Day 2	Physiological and molecular alterations in Schrenkiella parvula under mild salt stress
19:00	Keriman Şekerci (Tohoku University, Graduate School of Life Sciences)
Day 3	A Comparative Study of Adaptive Stress Tolerance in the Brassicaceae Family
19:00	Andrea Ramirez Ramirez (Stanford University)
	A Ca2+ sensor switch for SOS1 Na+/H+ antiporter activation confers tolerance to elevated salt stress in
Day 2	Arabidopsis
18:00	Joerg Kudla (Institut für Biologie und Biotechnologie der Pflanzen, Westfälische Wilhelms-Universität Münster,
	48149 Münster, Germany)
Day 3	Dissecting genetic mechanism of natural variation in salt tolerance among Arabidopsis thaliana
18:00	Takuma Kajino (Dept. of Bioscience, Tokyo Univ. of Agriculture)
Day 2	Analyses of salt susceptibility of Arabidopsis inositol transporter (INT) loss-of-function mutants
19:00	Li See Ng (National Chung Hsing University, Taiwan)
	Soybean acyl-CoA-binding proteins modulate the activity of their protein interactor lipoxygenase in
Day 3	transgenic Arabidopsis during salinity stress
19:00	Mee-Len Chye (University of Hong Kong)
Day 2	Identification of proteins interacting with CBL4 using a proximity biotinylation enzyme, AirlD
18:00	Akira Nozawa (Ehime University)
	Phosphorylation of Arabidopsis Glycine-Rich RNA-Binding Protein 8 by ABA-non-activated SnRK2s
	triggers its localization to the stress granules upon salinity stress by promoting its liquid-liquid phase
Day 3	separation
18:00	Adrian Mateusz Kasztelan (Institute of Biochemistry and Biophysics, Polish Academy of Sciences, Poland)
	Defects in Arabidopsis N-Acetylglucosamine-1-P Uridylyltransferase Expression Impairs Protein N-

Arabidopsis for SDGS CHILLMAN	
<del></del>	
PO-166 Day 3 18:00	Dissecting bacterial root colonization strategies using complex synthetic communities on diverse hosts  Gijs Selten (Utrecht University)
PO-167 Day 2 19:00	Designing the assessment platform for determining the impacts of microbes to plant stress resilience Tao-Ho Chang (Academy of Circular Economy, National Chung Hsing University, Taiwan)
	Microbiome colonization leads to emergent plant phenotypes at elevated temperature.
CC13 19:00 PO-169 Day 2	Hannah M. McMillan (Department of Biology, Duke University, Durham, NC 27708, USA)  Root endophyte Colletotrichum tofieldiae promotes plant growth and recruits beneficial bacteria to roots under laboratory and field conditions with nitrogen deficiency
18:00	Kei Hiruma (The University of Tokyo)
PO-170 Online	Root ER bodies and tryptophan derived secondary metabolites modulate root microbiota assembly  Arpan Kumar Basak (Institute of Environmental Sciences, Faculty of Biology, Jagiellonian University, Krakow,  Poland)
06 Epige	netics
	Site-specific epigenetic regulation-mediated plant defense resposne
19:00	Yuan Wang (Institute of Genetics and Developmental Biology, Chinese Academy of Sciences)  Elucidation of molecular mechanism underlying the antagonistic roles of class I and II RPD3-like histone
PO-172 Day 3 19:00	deacetylases in response to environmental stresses  Minoru Ueda (Plant Genomic Network Research Team, RIKEN CSRS, Japan)
	Hi-C Analyses Reveal Altered Chromatin Conformation Under Elevated CO2
18:00	Scott Lewis (Donald Danforth Plant Science Center, MO, USA)
PO-174 Day 3 18:00	Regulatory mechanism of heat-active retrotransposons by SET Domain Proteins SUVH2  Niu Xiaoying (Hokkaido university, Japan)
10.00	Compensation of H2A.Z and Polycomb Repressive Complex 2 in Determining Plant Cell Fate under Low
	Ambient Temperature
19:00	Kehui Zhu (Key Laboratory of Plant Cell and Chromosome Engineering, Institute of Genetics and Developmental Biology, Chinese Academy of Sciences, Beijing)
PO-176 Day 3	Epigenetic regulation by a long-term environment-responsive promoter of Arabidopsis halleri
19:00	Hanako Shimizu (Kyoto University, Japan)
	Co-transcriptional regulation of VIN3 expression by a RNA binding protein during vernalization
18:00	Yusheng Zhao (CAS, institute of genetics and developmental biology)
PO-178 Day 3	A coiled-coil protein associates Polycomb Repressive Complex 2 with KNOX/BELL transcription factors to maintain silencing of cell differentiation-promoting genes in the shoot apex Wentao Wang (Huazhong Agricultural University)
	Down to earth: VAL1 and VAL2 affect root development in Arabidopsis
19:00	José María Olvera Herrera (Laboratorio de Genética Molecular, Epigenética, Desarrollo y Evolución de plantas. Instituto de Ecología, Universidad Nacional Autónoma de México, México)
DO 100	Chromatin remodeling in the regulation of somatic genome integrity and meiotic inheritance in
PO-180 Day 3 19:00	Arabidopsis Wen Hui Shen (IBMP-CNRS, 12 rue du Général Zimmer, 67084 Strasbourg, France)
10.00	Transposition and silencing mechanisms of Tpn1 family transposable elements in the Japanese morning
PO-181 Day 2	glory
18:00	Yuki Mizunaru (Grad. Sch. of SLS., Kyushu Univ.)
PO-182 Day 3 18:00	Effect of transposon mobilization on genomic imprinting in Arabidopsis  Gerardo del Toro de León (Max Planck Institute of Molecular Plant Physiology)
10.00	Antagonistic regulation of endosperm development by maternally and paternally imprinted genes in
PO-183 Day 2	Arabidopsis thaliana
19:00	Yuko Wada (Nara Inst. of Sci. and Tech., Japan)
DO 404 D 0	Dissecting parent-of-origin allele specific expression in Arabidopsis hybrids using fluorescence-activated
19:00	nuclear sorting Ida Velle Myking (University of Oslo, Norway)
	Upstream regulator of genomic imprinting in rice is a small RNA-associated chromatin remodeler
18:00	Avik Kumar Pal (National Centre for Biological Sciences, Tata Institute of Fundamental Research, GKVK
	Campus, Bangalore 560 065, India)
PO-186 Day 2	Sbf I-based DNA double-strand breaks induce histones H4K16ac and H2A.Z deposition at multiple
18:00	cleavage sites in Arabidopsis thaliana Kohei Kawaguchi (Kyoto Prefectural University, Kyoto, Japan)
10.00	Single-molecule Targeted Accessibility and Methylation Sequencing of Centromeres, Telomeres, and
PO-187 Day 2	rDNAs in Arabidopsis
19:00	Weipeng Mo (Department of Biology, School of Life Sciences, Southern University of Science and
	Technology Shenzhen 518055 (china)

Technology, Shenzhen 518055, China)

PO-188 Day 3	Cotranscriptional demethylation induces global loss of H3K4me2 from active genes in Arabidopsis
19:00	Shusei Mori (The University of Tokyo, Japan)
PO-189 Day 2	Regulatory mechanisms and roles of centromere arrangement in Arabidopsis thaliana
18:00	Takuya Sakamoto (Fac. Sci. Tech., Tokyo Univ. Sci., Japan)
PO-190 Day 3	Transition of histone H2A.Z distribution on the genic region in the evolution of Arabidopsis
18:00	Soichirou Satoh (Kyoto Prefectural University, Kyoto, Japan)
	Gene-transposon transcripts can be epigenetically regulated and impact gene response to stress
PO-191 Day 2	conditions in Arabidopsis thaliana
CC24 19:00	Jeremy Berthelier (Plant Epigenetics Unit, Okinawa Institute of Science and Technology (OIST), Okinawa,
0024	Japan)
PO-192 Day 3	Investigating small RNA-mediated silencing mechanisms in duckweeds
19:00	Veronica Barragan-Borrero (Gregor Mendel Institute of Molecular Plant Biology, Vienna, Austria)
PO-193 Day 2	Translation-coupled Epigenetic Regulation of Transposable Elements in Plants
CC12 18:00	Zhen Lei (CAS Center for Excellence in Molecular Plant Sciences)
PO-194 Day 3	RNA deadenylation pathway suppresses transposable elements in Arabidopsis
CC24 18:00	Ling Wang (CAS Center for Excellence in Molecular Plant Sciences / Institute of Plant Physiology and
CC24	Ecology)
PO-195 Day 2	RNA-directed DNA Methylation promotes genome integrity in Arabidopsis epiRILs
19:00	ATSUSHI SHIMADA (Okinawa Institute of Science and Technology, Japan)
	Identification of underlying mechanisms involved in transposon activity and distribution in natural
PO-196 Day 3	accessions of Arabidopsis thaliana
19:00	Laura Diezma Navas (Gregor Mendel Institute (GMI), Vienna, Austria)
	Comprehensive characterization of transposable element-encoded genes and their function in
PO-197 Day 2	Arabidopsis thaliana
18:00	Carles Borredá (Institute of Plant Sciences Paris-Saclay (IPS2), Université Paris-Saclay, INRAE, Université
	Evry, Université Paris Diderot)
	The roles of histone H2A variants for the establishment of transposon-specific silent modification in
PO-198 Day 3	·
18:00	Shoko Oda (The University of Tokyo)
	Induction of T-DNA amplification by retrotransposon-derived sequences
19:00	Wenxin Yuan (Yale University, Department of Molecular, Cellular and Developmental Biology, New Haven,
	Connecticut, USA)
DO 200 Day 2	Molecular mechanisms on the maintenance of epigenetic silent marks regulated by histone variant H2A.W
19:00	and chromatin remodeler DDM1
	Akihisa Osakabe (Department of Biological Sciences, The University of Tokyo, Japan)
18:00	Re-analysis of publicly available methylomes using signal detection yields new information
10.00	Alenka Hafner (Pennsylvania State University) High parent dominance of trimethylation of lysine 27 of histone H3 level in intraspecific hybrids of
PO-202 Day 3	Arabidopsis thaliana
18:00	Ryo Fujimoto (Kobe University, Japan)
10.00	The Influence of loss of DECREASE IN DNA METHYLATION 1 function on heterosis in Arabidopsis
PO-203 Day 2	·
19:00	Keita Nishimura (Kobe University, Graduate School of Agricultural Science, Kobe, Japan)
19.00	
PO-204 Day 3	Contribution of epigenetic mutations to the adaptive evolution of plant by regulating specialized
19:00	Kazumasa Shirai (Kyushu Institute of Technology, Japan)
	Live-cell imaging of H3K4me3 in Arabidopsis thaliana
18:00	· · · · · · · · · · · · · · · · · · ·
	Megumi Matsuoka (Department of Integrative Biosciences, The University of Tokyo, Japan)  Enzyme-based fluorescence labeling of DNA methylation on a chromosome scale
18:00	Min Jeong Kim (Department of Agriculture, Forestry and Bioresources, Seoul National University, Seoul
10.00	will Jeong Kim (Department of Agriculture, Forestry and Bioresources, Seoul National University, Seoul 08826, Korea)
	Real-time visualization of somatic retrotransposition reveals principles of genomic permissivity to
PO-207 Day 2	transposon integration
19:00	Jie Chu (National Key Laboratory of Plant Molecular Genetics, CAS Center for Excellence in Molecular Plant
	Sciences, Chinese Academy of Sciences, Shanghai 200032, China.)
PO-208	A Novel strategy to enhance phenotypic variation in plants
Online	Hidayah Faisal Alotaibi (Doctor)
	Transcription Regulation of Genes and TEs in Arabidopsis
19:00	Yi Shu (Southern University of Science and Technology)
10.00	The same section of the control of the foundation of the section o

07 R	RNA k	piology
PO-209	Day 2	RNA triple helical structure facilitates retrotransposon mobilization in Arabidopsis
	18:00	Hui Li (CAS Center for Excellence in Molecular Plant Sciences / Institute of Plant Physiology and Ecology)
		Proof of concept: circular antisense RNAs (caRNAs) as a new mode of action for RNA-based plant
PO-210	Day 3	protection
CC28		Timo Schlemmer (University of Regensburg, Regensburg)
		siRNAs derived from nitrate reductases, NIA1 and NIA2, play vital roles in growth and stress adaptation
	19:00	Yan Yan (Institute of Plant and Food Science, Department of Biology, Southern University of Science and
CC17		Technology, Shenzhen, 518055, China)
PO-212	Day 3	The negative effect of flavonoids against dsRNA-cleaving activities of Dicer-like proteins
	19:00	Midori Tabara (Ritsumeikan University)
PO-213		ARGONAUTE1 nuclear/cytoplasmic shuttling controls small RNA regulation in Arabidopsis thaliana.
1 0-210	18:00	Belén Moro (Centre for Research in Agricultural Genomics (CRAG))
PO-214		Functions of Arabidopsis FHA2 in miRNA biogenesis
1 0-214	18:00	•
DO 245		Joong-Tak Yoon (Yonsei University, Republic of Korea)
		Plant miRNA-target 3'-end pairing affects miRNA-mediated translational repression
CC12	19:00	Ho-Ming Chen (Academia Sinica, Taiwan)
DO 246	D-11 2	Forward genetics identifies a DEAD box RNA helicase and a DnaJ-domain chaperone as new miRNA
<u>PU-210</u>		biogenesis factors
	19:00	Florian Brioudes (Swiss Federal Institute of Technology (ETH), Zürich, Switzerland)
DO 217	Day 2	Reevaluation of Intracellular DCL1 Localization of Wild-type and Mutant Alleles in Relevance to Functional
<u>PU-217</u>		Ability and Phenotypes
DO 040	18:00	Yuichiro Watanabe (Dept. of Life Sciences, Grad. School of Arts and Sciences, University of Tokyo)
<u>PU-218</u>		An Evolutionarily Conserved Secondary Structure motif regulates the miRNA cleavage
	18:00	Yueying Zhang (John Innes Centre,UK)
PO-219		Chromatin-associated microprocessor assembly is regulated by the U1 snRNP auxiliary protein PRP40
	19:00	Artur Jarmolowski (Department of Gene Expression, Faculty of Biology, Institute of Molecular Biology and
		Biotechnology, Adam Mickiewicz University, Poznan 61-614, Poland.)
DO 220	D-11 2	A mutation in the Arabidopsis tri-snRNP associated protein suppressesthe sta1-1 defects by restoring
<u>PU-220</u>		protein-protein interaction
	19:00	Heejin Kim (Sogang university, Korea)
PO-221		A U1 snRNP component regulates thermomorphogenesis through alternative RNA splicing in Arabidopsis
	18:00	Geeng-Loo Chong (Institute of Plant and Microbial Biology, Academia Sinica, Taiwan)
PO-222		Dynamic RNA methylation modulates growth in response to light and temperature in Arabidopsis
	18:00	Ullas Pedmale (Cold Spring Harbor Laboratory)
PO-223	Day 2	Minor-intron splicing is required for proper HSP-mediated plant response to heat shock
	19:00	Zofia Szweykowska Kulinska (Department of Gene Expression, Institute of Molecular Biology and
		Biotechnology, Faculty of Biology, Adam Mickiewicz University, Poznan, Poland)
		Serine/Arginine-rich 45-mediated Transcriptional and Splicing Regulation in Plant Immunity in Arabidopsis
PO-224	-	thaliana
	19:00	Xiao-Ning Zhang (St. Bonaventure University, USA)
PO-225		Cleavage Factor I is essential for maintaining the diversity at the 3' ends of mRNA in plants
	18:00	Tomohiko TSUGE (ICR, Kyoto University, Japan)
PO-226		Minor-intron splicing is important for nutrient-dependent growth regulation in plants
	18:00	Kodai Ishibashi (Grad. Sch. Front. Sci., Univ. Tokyo)
PO-228	Day 3	Dissecting the molecular mode of action of Restorer-of-Fertility-like proteins in plant mitochondria
	19:00	Sang Dang Huynh (ARC Centre of Excellence in Plant Energy Biology - School of Molecular Sciences, The
		University of Western Australia)
		Interaction between polyadenylation and C-to-U editing of mitochondrial mRNA involved in cytochorome c

PO-510 Day 3	The Regulation of Arabidopsis MALE STERILITY1 (MS1) in Pollen Development
18:00	Helen White (University of Nottingham)
	Investigation of genes involved in species-specific pollen tube guidance and gametophyte development.
19:00	Masahiro Kanaoka (Prefectural University of Hiroshima)
	Tip-localized receptor modules orchestrate pollen tube behavior in angiosperms
19:00	Hidenori Takeuchi (Nagoya University, Japan)
	Quantification of species-preferential pollen tube guidance by the ovule in Arabidopsis species
18:00	Takuya T Nagae (Graduate School of Agricultural and Life Sciences, The University of Tokyo)
18:00	Novel function of cuticles as a reproductive barrier in Brassicaceae
	Yoshinobu Kato (Grad. Sch. Agric. Lif. Sci., The University of Tokyo)
19:00	Roles of cytoskeleton in Arabidopsis synergid cells  Daichi Susaki (Yokohama City University, Japan)
	Type II arabinogalactans play important roles in pollen - pistil interactions
19:00	Sílvia Coimbra (LAQV/REQUIMTE, Departamento de Biologia, Faculdade de Ciências, Universidade do Porto,
	Rua Campo Alegre s/n, 4169-007 Porto, Portugal)
PO-517 Day 2	Analysis of a key factor regulating cell fusion between early endosperm and persistent synergid.
18:00	Daisuke Maruyama (Kihara Institute for Biological Research, Yokohama City University)
PO-518 Day 3	Cytological Analysis of Cell Invasion during Gametophyte Interactions in Arabidopsis
18:00	Nicholas James Desnoyer (University of Zurich)
DO 540 D 0	Molecular control of dominance/recessivity interactions between self-incompatibility alleles in
PO-519 Day 2 19:00	
	Vincent Castric (CNRS - University of Lille)  Molecular basis of multi-phased pistil defense mechanism against foreign pollen
19:00	Sota Fujii (The University of Tokyo)
	Studies toward unveiling the molecular scenario of double fertilization in Arabidopsis thaliana
18:00	Tomoko Igawa (Chiba University, Japan)
PO-522 Day 3	Identification and analysis of the putative GCS1-interacting proteins in Arabidopsis
18:00	Ari Yoshimura (Chiba University, Japan)
	Sperm nuclear fusion is not required for the onset of embryogenesis
19:00	Shuh-ichi Nishikawa (Faculty of Science, Niigata University)
19:00	The female gametes expressed protein FOG3 is required for gamete fusion in Arabidopsis thaliana Yuan Wang (State Key Laboratory of Protein and Plant Gene Research, Peking-Tsinghua Center for Life Sciences at College of Life Sciences, Peking University, China)
23 Embry	yogenesis/Seed development
	Approach to elucidate the molecular mechanism regulating the basal meristem of hornwort sporophytes
18:00	Kazune Ezaki (Rikkyo university)
PO-526 Day 3 18:00	Delayed embryo-proper development triggers suspensor derived polyembryony in Arabidopsis
	Honglei Wang (Wageningen University & Research, Netherland)  Ouantification of avgets polarization dynamics for body axis formation in Arabidonsis
19:00	Quantification of zygote polarization dynamics for body axis formation in Arabidopsis  Minako Ueda (Tohoku University, Japan)
10.00	Elucidation of elongation mechanism of Arabidopsis zygote using image analysis methods based on live-
PO-528 Day 3	

Hikari Matsumoto (Tohoku University, Japan)

		Antagonistic effects on Arabidopsis hybrids exhibiting endosperm based post-zygotic hybridization
PO-529	Day 2	barriers
	18:00	Renate Marie Alling (University of Oslo)
PO-530	Day 3	Endosperm cellularization is initiated by a family of auxin related factors
	18:00	Nicolas Butel (Max Planck Institute of Molecular Plant Physiology, Potsdam-Golm, Germany)
		The identification of type I MADS box genes as the upstream activators of an endosperm-specific
PO-531	Day 2	invertase inhibitor in Arabidopsis
	19:00	Dongfang Wang (Spelman College)
		Natural variation in WHITE-CORE RATE 1 regulates redox homeostasis in rice endosperm to affect grain
PO-532	Day 3	
	19:00	Bian Wu (Food Crops Institute, Hubei Academy of Agricultural Sciences, Wuhan, China)
DO 500	_	Identification and functional investigation of diversifying seed genes at the maternal-offspring interface in
PO-533		Arabidopsis thaliana
	18:00	
<u>PO-534</u>		The plant hormone ABA alleviates the interploidy barrier
	18:00	Hikaru Sato (Swedish University of Agricultrual Sciences, Sweden)
DO 525	D-11 0	Impact of LYSOPHOSPHATIDIC ACID ACYLTRANSFERASE 2 (LPAT2) in de novo glycerolipid metabolism
<u>PU-535</u>		and developmental control: Two sides of the same coin?
DO 500	19:00	Niña Alyssa Barroga (Center for Sustainable Resource Science, RIKEN, Yokohama 230-0045, Japan)
PO-536		Comparative Omics of Arabidopsis Developing Seed with Enhanced Fatty Acid Synthesis
DO 507	19:00	Brian P Mooney (University of Missouri)
PO-537		Molecular basis of the key regulator WRINKLED1 in plant oil biosynthesis
50.500	18:00	Que Kong (School of Biological Sciences, Nanyang Technological University, Singapore 637551, Singapore.)
<u>PO-538</u>		A MYB transcription factor regulates the biosynthesis of very-long-chain fatty acids in Arabidopsis
50 540	18:00	Yuzhou Yang (School of Biological Sciences, Nanyang Technological University)
PO-540		Exploring RRT1 function in the synthesis of Arabidopsis seed mucilage RG1
	19:00	Yuki Aoi (INRAE, Institut Jean-Pierre Bourgin, Université Paris-Saclay, AgroParisTech, 78000, Versailles,
DO 544		France)
<u>PO-541</u>		Apetala 2 regulates seed longevity through lipid polyester accumulation
	18:00	Eduardo Bueso Rodenas (Instituto de Biología Molecular y Celular de Plantas, Universitat Politecnica de Valè
DO 542	Day 2	ncia, 46022 Valencia, Spain)
		Rational approaches to synchronizing germination in seed populations
CC19	10.00	Liam Walker (School of Life Sciences, University of Warwick)  AtC3H59/ZFWD3, an Arabidopsis nuclear protein, interacts with Desi1 and is involved in seed germination,
PO-543	Day 2	seedling development, and seed development
10010	19:00	Hye-Yeon Seok (Pusan National University, Republic of Korea)
		AtC3H12, an Arabidopsis non-TZF transcriptional activator, negatively affects seed germination and
PO-544	Day 3	seedling development
	19:00	Yong-Hwan Moon (Pusan National University)
PO-545	Day 2	Constructing and testing a genetic network for controlling seed germination in Arabidopsis
	18:00	Ming Yang (Department of Plant Biology, Ecology, and Evolution, Oklahoma State University, Stillwater, OK
		74078, USA)
PO-546	Day 3	Arabidopsis INDETERMINATE DOMAIN 4 is involved in the control of seed germination by light
	18:00	Akiko Kozaki (Shizuoka University, Japan)
		AtC3H12, an Arabidopsis non-TZF transcriptional activator, negatively affects seed germination and
PO-547	Day 2	seedling development
	19:00	Mairaj Bibi (PUSAN NATIONAL UNIVERSITY)
PO-548	Day 3	Structure-function analysis of TMB-RESISTANT1, a B2 Raf-like kinase in Arabidopsis thaliana
	19:00	Eunsun Kim (Sejong University, Republic of Korea)
PO-549	Day 2	Heterosis in Intraspecific Hybrid of Arabidopsis thaliana during Early Development
	18:00	Putri Wijayanti (Division of Biological Science, Graduate School of Science and Technology, Nara Institute of
		Science and Technology, Japan)
		Identification and characterization of soybean KIX genes by comparative analysis with Arabidopsis
PO-550	Day 3	thaliana
	18:00	MI-SUK SEO (National institute of crop science, Republic of Korea)

#### 24 Stem cell/Regeneration

PO-551 Day 2 Analysis of a blue light receptor CRY1 during plant regeneration

19:00 Min Li (University of Tokyo, Japan)

PO-552 Day 3 Molecular Mechanisms of Light-Mediated Regulation of Plant Regeneration

19:00 Yetkin Caka Ince (RIKEN)

PO-553 Day 2 HY5-mediated light signals determine the new meristem fate during plant regeneration
18:00 Yu Chen (Department of Biological Sciences, The University of Tokyo, Japan)
ASHH2 regulates plant regeneration through regulation of photosynthesis and glucose metabolic
PO-554 Day 3 pathways
18:00 Kana Yoshida (University of Tokyo, Japan)
Hyperosmotic stress-induced somatic embryogenesis and its continuous culture in Japanese honewort
PO-555 Day 2 (Cryptotaenia japonica; Apiaciae)
19:00 Sana Takahashi (Yokohama City University, Japan)
Molecular identities of wounding signals that promote plant regeneration and their perception
PO-556 Day 3 mechanisms
19:00 Yosuke Sasai (The University of Tokyo, Japan)
PO-557 Day 2 Roles of At2-MMP during tissue reunion in incised Arabidopsis inflorescence stem
18:00 Afiifah Machfuudzoh (Graduate School of Science and Technology, University of Tsukuba, Japan)
PO-558 Day 3 Exposure to long-term cold enhances callus formation in Arabidopsis
18:00 Fu-Yu Hung (RIKEN, CSRS)
PO-559 Day 2 Mechanistic analysis of the improvement of shoot regeneration ability by gamma irradiation
19:00 Ryuhei Hashimasa (The University of Tokyo, Japan)
. yame masa (me emission) er renye, capany
PO-560 Day 3 Brassinosteroid receptor-mediated regulation of tissue regeneration in Arabidopsis
19:00 Ye Zhang (Nara Institute of Science and Technology, Japan)
Utilization of Arabidopsis thaliana developmental regulator genes for differentiation control of transgenic
PO-561 Day 2 plant cells
18:00 Shohei Koyama (Chiba University, Japan)
Transcriptome and metabolome profiles during cellular differentiation of tobacco transgenic cells
PO-562 Day 3 expressing Arabidopsis developmental regulator genes
18:00 Yuka Sato (Chiba University, Japan)
rama cano (cimea cimicion), capany
Genetics and Multi-Omics Integration Analyses Identified Cell Differentiation State Maintenance
PO-563 Day 2 Mechanisms in hope-1 Mutant Hypocotyls
19:00 Ali Ferjani (Department of Biology, Tokyo Gakugei University)
PO-564 Day 3 It's All in the Timing: Enhancing Regeneration Efficiency Using Morphogenic Factors
CC04 19:00 Bastiaan Bargmann (Virginia Tech)
PO-565 Day 2 Finding the sweet spot – How brassinosteroids interfere with shoot regeneration processes
18:00 Luiselotte Rausch (RIKEN Center for Sustainable Resource Science, Tsurumi, Yokohama, Kanagawa 230-
0045, Japan)
Submergence promotes auxin-induced callus formation through ethylene-mediated post-transcriptional
PO-566 Day 3 control of auxin receptors
18:00 Seung Yong Shin (Plant Systems Engineering Research Center, Korea Research Institute of Bioscience and
Biotechnology, Korea)
PO-567 Day 2 Functional analysis of histone methyltransferase required for shoot regeneration
19:00 Masako Migihashi (The University of Tokyo, Japan)
PO-568 Day 3 Checkpoints in cellular programming during root regeneration
19:00 Bruno Guillotin (New York University, Center for Genomics and Systems Biology)
PO-569 Day 2 Functional analysis of a chromatin remodeling factor involved in the process of plant regeneration
18:00 Ayaka Horie (University of Tokyo, Japan)
WIND1 controls site-specific histone acetylation/deacetylation and promotes somatic embryogenesis in
PO-570 Day 3 Arabidopsis
18:00 Akira Iwase (RIKEN CSRS, Japan)
Molecular mechanisms underlying local histone modification changes during stem cell formation in the
PO-571 Day 2 moss Physcomitrium patens
19:00 Masaki Ishikawa (National Institute for Basic Biology, Japan)
Single-nuclei transcriptome and chromatin accessibility analyses reveal gene regulatory networks
PO-572 Day 3 underlying stem cell formation in the moss Physcomitrium patens
19:00 Ruan Morne De Villiers (National Institute for Basic Biology, Japan)
PO-573 Day 2 Cytokinin-dependent regulation of plant cell dedifferentiation via pre-mRNA splicing in Arabidopsis
18:00 Ami Takeuchi (The University of Tokyo, Japan)
rum rumousm (mo simonomy si remys, supumy
PO-574 Day 3 Single-nucleus RNA-seq revealed transcriptomic landscapes of epidermal reprogramming
18:00 Hatsune Morinaka (CSRS, RIKEN, Kanagawa, Japan)
PO-575 Day 2 Transcriptional Regulation of Cell-cell Movement During Root Tip Regeneration
CC04 19:00 Itay Cohen (Hebrew University of jerusalem)
PO-576 Day 3 Plant Regeneration: To Cell and Back
PO-577 Day 2 An induced pluripotent stem cell (iPS) tool to overcome regenerative recalcitrance in plants
18:00 Jana Wittmer (Wageningen University and Research )
, , ,

Data as of 2023/6/5. "CC##" indicates the presentation being selected for a short talk in that session. Only the 1ry affiliation is shown per person. No italic, Poster: page 25 of 32 superscript, or subscript is reflected.

		Uncovering the transcriptional regulatory network involved in boosting wheat regeneration and
	-	transformation
1	8:00	Xuemei Liu (Institute of Genetics and Developmental Biology, Chinese Academy of Sciences)
DO 570 D	21.2	Confocal microscopy-enabled morphometric reverse tracking of Arabidopsis callus development from leaf
	9:00	mesophyll protoplasts  Retioned Chetylyte (May Planck Institute for Rielagy Tübingen, Cormony)
		Patience Chatukuta (Max Planck Institute for Biology Tübingen, Germany)  Molecular genetic analysis of the role of BTAF1, a TBP-associated factor, in shoot regeneration
	9:00	Takaaki Yonekura (University of Tokyo, Japan)
		CLE peptides modulate shoot development through WUS regulation
	8:00	Nadiatul A. Mohd-Radzman (Sainsbury Laboratory Cambridge University (SLCU), Bateman Street, CB2 1LR,
		Cambridge, United Kingdom.)
PO-582 D	ау 3	Analysis of stem cell-promoting CLE peptide signaling in the shoot apical meristems of land plants
CC10 1	8:00	Yuki Hirakawa (Gakushuin University, Japan)
PO-583 D	ay 2	Functional analysis of JINGASA transcription factor in stem cell dynamics in Marchantia polymorpha
1	9:00	Go Takahashi (Gakushuin University, Japan)
DO 504 -		Conserved expression of a core plant stem cell regulator despite extreme divergence in cis-regulatory
		sequence and organization
	9:00	Danielle Ciren (Cold Spring Harbor Laboratory)
PO-585 Online		Budding Heads: Activation and Competition of Arabidopsis Axillary Buds  Zoe Nahas (Sainsbury Laboratory, University of Cambridge)
Online		Zoe Narias (Sainsbury Laboratory, University of Cambridge)
25 Le	af d	levelopment
		Competition for resources during semi-sequential growth of developmental units drive allometric patterns
		in the grass Setaria

		Instituto de Ecología, Universidad Nacional Autónoma de México, México)
PO-604	Day 3	As above so below? ULTRAPETALA1 regulation in Arabidopsis root development
	19:00	Carlos Emiliano Cortés-Quiñones (Laboratorio de Genética Molecular, Epigenética, Desarrollo y Evolución de
		Plantas, Instituto de Ecología, Universidad Nacional Autónoma de México (UNAM), México)
PO-605	Day 2	SCFFBS1 Regulates Root Quiescent Center Cell Division via Protein Degradation of APC/CCCS52A2
	18:00	Kyoung Rok Geem (Chungbuk National University, Korea)
		Combined Approach of GWAS and Phylogenetic Analyses to Identify New Candidate Genes That
		Participate in Arabidopsis thaliana Primary Root Development Using Cellular Measurements and Primary
PO-606	Day 3	Root Length
	18:00	Brenda Anabel Lopez-Ruiz (Laboratorio de Genética Molecular, Desarrollo y Evolución de Plantas,
		Departamento de Ecología Funcional, Instituto de Ecología, UNAM)
		Uncovering the hidden aspects of cell division and elongation dynamics at the tip of growing Arabidopsis
PO-607		roots using 4D-microscopy, Al-assisted image processing, and data sonification
	19:00	Tatsuaki Goh (Div. Biol. Sci., NAIST, Japan)
PO-608	Day 3	Dissecting the role of miR160-dependent regulation of ARF gene expression in root cap differentiation
	19:00	Keita Tanaka (Nara Institute of Science and Technology, Graduate School of Science and Technology,
		Division of Biological Science)
PO-609		A comprehensive developmental atlas of suberized tissues at the single cell level
	18:00	Charlotte Noelle Miller (The Salk Institute of Biological studies)
<u>PO-610</u>		Single-cell profiling of suberizing cells identifies a novel periderm regulator
	18:00	Manisha V. Haag (Salk Institute for Biological Studies)
<u>PO-611</u>		An inquiry into the origin of radial patterning of root-hair-cell distribution
	19:00	Kyeonghoon Lee (Department of Biological Sciences, Seoul National University)
PO-612		SUPERROOT2-dependent Fine-tuning of Local Auxin Distribution for Arabidopsis Lateral Root Formation
	19:00	Chieko Goto (Grad. Sch. of Sci., Kobe Univ.)
DO 040	_	Auxin biosynthesis inhibitors impair auxin-induced directional nuclear migration in lateral root founder
PO-613		cells in Arabidopsis thaliana
50.044	18:00	Sanae Kaneta (Osaka University, Japan)
PO-614		Dimorphism of LR growth regulated by auxin and cytokinin
	18:00	Feiyang Lin (Grad. Sch. Life Sci., Hokkaido Univ., Japan)
<u>PO-615</u>		Functional Analysis of RLF, a Cytochrome b5-Like Heme Binding Protein, in Plant Organ Development
	19:00	Kentaro Iwata (Grad. Sch. of Sci., Kobe Univ., Japan)
<u>PO-616</u>	Day 3	Two-step regulation of lateral root spacing in Arabidopsis thaliana
	19:00	Shohei Oshiro (Div. Bio. Sci., NAIST)
		Coordinating root system architecture: the intersection of CEP and Cytokinin hormone pathways in
		Arabidopsis
CC26	18:00	
		Transcriptional network to synchronize alteration in the developing lateral root primordium (LRP) and
<u>PO-618</u>		LRP-overlay cells
	18:00	Kosuke Mase (Faculty of Agriculture, Meijo University)
PO-619		MYB93-mediated Very Long-Chain Fatty Acid Signaling networks in lateral root primordium development
	19:00	Yuta Uemura (Meijo University, Japan)

#### 27 Cell division/Cell cycle

Two Arabidopsis cyclins are sensitive targets to intracellular acidification acting as a hub between PO-620 Day 3 perception and stress response

19:00 gaetano bissoli (Universitat Politecnica Valencia, Spain)

PO-621 Day 2 Cell proliferation control mediated by ANAC082 in response to nucleolar stress in Arabidopsis thaliana 18:00 Tai-yin Hsu (National Cheng Kung University, Taiwan)

PO-622 Day 3 Control of DNA replication by histone methyltransferases ATXR5 and ATXR6 in Arabidopsis thaliana

18:00 Kar Yee Moo (Graduate School of Science and technology, Nara Institute of Science and Technology, Japan)

	A GRAS family transcription factor, SCARECROW-LIKE28, regulates cell size by inhibiting G2 progression
PO-623 Day 2	in Arabidopsis
19:00	Masaki Ito (Sch. Biol. Sci. Tech., Col. Sci. Eng., Kanazawa Univ., Japan)
PO-624 Day 3	CRISPR/Cas9-mediated mutagenesis of SAMBA gene alters growth and development in plants.
19:00	
19.00	Nubia Eloy (Universidade de São Paulo, Department of Biological Sciences, Escola Superior de Agricultura
DO 005	'Luiz de Queiroz')
PO-625 Day 2	Functional analyses of HPY2/NSE2 and SMC5/6 complex.
18:00	Takashi Ishida (Kumamoto University, Japan)
	Analysis of the effect of autopolyploidization on root growth in Arabidopsis thaliana with spatial reference
PO-626 Day 3	to "high-ploidy syndrome"
18:00	Suzuka Kikuchi (Fac. Adv. Sci. and Tech., Kumamoto Univ., Japan)
PO-627 Day 2	CDKG2 and SKIP act downstream of UBP14 to control endoreduplication and cell growth in Arabidopsis
19:00	Shan Jiang (Institute of Genetics and Developmental Biology, Chinese Acadamy of Sciences, China)
	Expanding the kinetochore universe in flowing plants
19:00	Shinichiro Komaki (Nara Institute of Science and Technology, Graduate School of Biological Sciences, Japan)
PO-629 Day 2	Keeping it together: The role of scaffold proteins during division plane control
18:00	Jonas Buhl (Leibniz-Institute of Plant Biochemistry, Halle (Saale), Germany)
PO-630 Day 3	Novel plant cell division inhibitors identified by chemical screening using Arabidopsis zygote
18:00	Yusuke Kimata (Tohoku University, Japan)
	Plant-specific mitotic microtubule structures and cell division modes
19:00	Takema Sasaki (Graduate School of Science, Nagoya University, Japan)
19.00	, , , ,
DO 632 D 2	GRAS Family Transcription Factor Is A New Regulator Of Asymmetric Cell Division And Polarity In Moss
	Physicomitrium Patens
19:00	Alisa Vyacheslavova (Hokkaido University, Graduate School of Life Science)
PO-633 Day 2	Shaping root architecture
18:00	V Willemsen (Cluster Plant Developmental Biology, Wageningen University & Research, Droevendaalsesteeg
	1, Wageningen, The Netherlands)
20 0 11 0	at the state of th
28 Cell &	tissue differentiation
PO-634 Day 3	PBLs and their role in defining root endodermis signaling specificity
18:00	Irene Guzmán-Benito (University of Lausanne, Switzerland)
	CRISPR activation (CRISPRa) as a powerful tool for engineering gene regulatory networks in plants
19:00	
	Anaxi Houbaert (UNIL - DBMV)
	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots
19:00	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)
19:00	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots
19:00	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis
19:00 PO-637 Day 2	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis  Miguel de Lucas (Durham University - UK)
19:00 PO-637 Day 2 18:00	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis  Miguel de Lucas (Durham University - UK)  Visualization of spatiotemporal dynamics of cytokinin responses and its role in secondary growth
19:00 PO-637 Day 2 18:00 PO-638 Day 3	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis  Miguel de Lucas (Durham University - UK)  Visualization of spatiotemporal dynamics of cytokinin responses and its role in secondary growth initiation in Arabidopsis roots
19:00 PO-637 Day 2 18:00 PO-638 Day 3 18:00	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis  Miguel de Lucas (Durham University - UK)  Visualization of spatiotemporal dynamics of cytokinin responses and its role in secondary growth initiation in Arabidopsis roots  Shunji Shimadzu (University of Tokyo, Japan)
PO-638 Day 3 18:00 PO-639 Day 2	Patterning in 3D: imaging three-dimensional anatomy and epidermal cell fate in Arabidopsis roots  George Janes (University of Nottingham, School of Biosciences, UK)  Light regulates xylem cell differentiation via PIF in Arabidopsis  Miguel de Lucas (Durham University - UK)  Visualization of spatiotemporal dynamics of cytokinin responses and its role in secondary growth initiation in Arabidopsis roots  Shunji Shimadzu (University of Tokyo, Japan)  A zinc-finger transcription factor, LGA1, negatively regulates lateral growth in Arabidopsis and trees
